

Planning and Regulatory Services Committee

Tuesday, 25 June 2019

SUPPLEMENTARY AGENDA

The undernoted reports have been added to the Agenda for the meeting of the **Planning and Regulatory Services Committee** to be held at **Council Chambers, Council Office, High Street, Elgin, IV30 1BX** on **Tuesday, 25 June 2019** at **09:30**.

BUSINESS

3a) Section 36 Consent

3 - 94

Report by the Corporate Director (Economic Development, Planning and Infrastructure)

19/00156/S36 - Erect 29 wind turbines consisting of 18 turbines of an overall height from base to tip not exceeding 225m, 8 turbines of an overall height from base to tip not exceeding 200m and 3 turbines of an overall height from base not exceeding 149.9m. Associated infrastructure includes external transformer housing, crane pads, turbine foundations, access tracks, 2 substations, underground electricity cables and anemometry mast at Rothes III Windfarm, Moray

REPORT TO: SPECIAL MEETING OF THE PLANNING AND REGULATORY SERVICES COMMITTEE ON 25 JUNE 2019

SUBJECT: 19/00156/S36 - ERECT 29 WIND TURBINES CONSISTING OF 18 TURBINES OF AN OVERALL HEIGHT FROM BASE TO TIP NOT EXCEEDING 225M, 8 TURBINES OF AN OVERALL HEIGHT FROM BASE TO TIP NOT EXCEEDING 200M AND 3 TURBINES OF AN OVERALL HEIGHT FROM BASE NOT EXCEEDING 149.9M. ASSOCIATED INFRASTRUCTURE INCLUDES EXTERNAL TRANSFORMER HOUSING, CRANE PADS, TURBINE FOUNDATIONS, ACCESS TRACKS, 2 SUBSTATIONS, UNDERGROUND ELECTRICITY CABLES AND ANEMOMETRY MAST AT ROTHES III WINDFARM, MORAY

BY: CORPORATE DIRECTOR (ECONOMIC DEVELOPMENT, PLANNING & INFRASTRUCTURE)

1. REASON FOR REPORT

- 1.1 This report asks Committee to consider the consultation received from the Energy Consents Unit of the Scottish Government in relation to an Electricity Act 1989 Section 36 application (which includes deemed planning permission) for a new windfarm. This Section of the Electricity Act relates to consenting onshore electricity generation.
- 1.2 This report is submitted to Committee in terms of Section III (E) (1) of the Council's Scheme of Administration relating to exercising the functions of the Council as Planning Authority.

2. RECOMMENDATION

2.1 It is recommended that the Committee;-

- i) consider and note the contents of the report, as set out in Appendix 1, including the conclusions regarding the planning merits of the development which take into account the Moray Local Development Plan 2015 and all material considerations including the presence of existing neighbouring windfarms;
- ii) respond to the consultation request from the Scottish Government, lodging an objection to the proposed development on the basis of the recommendations set out in Appendix 1, in particular in terms of

the considered unacceptable significant landscape and visual impacts that would arise from the position and height of proposed turbines on the site (including cumulative impact), transportation issues and the impact on tourism and recreational interests;

- iii) **consider whether any additional comments on the proposal should be submitted; and**
- iv) **agree that in the event of approval and prior to determination, the Council request it be consulted on proposed conditions to be attached to any consent.**

3. BACKGROUND

- 3.1 The applicant Rothes III Limited (subsidiary company of Fred Olsen Renewables) has lodged an application for consent under Section 36 of the Electricity Act 1989 for the construction, operation and decommissioning of a proposed windfarm to be known as Rothes III 2.5km north of Archiestown. If granted, planning permission is deemed to be granted for the development (see Site Plan in **Appendix 2**).
- 3.2 As the estimated output of the windfarm will exceed 50mW, the proposal is to be determined by the ECU. Responsibility for consultation with statutory consultees, relevant local authorities, receipt of representations and determination lie with the ECU. In these circumstances the role of Moray Council, as planning authority, is as a consultee rather than being the determining authority.
- 3.3 The Scottish Government (Energy Consents & Deployment Unit) has invited Moray Council to comment on the proposed wind farm development within a specific timeframe along with other consultees. The period for consultation for Moray Council expires in mid June and an extension to this period has been granted until late June to accommodate referral to committee on 25 June 2019.
- 3.4 The developers were required to go through Pre-Application Consultation with local communities and public exhibitions were advertised and held across Moray in July 2018.

4. SUMMARY OF IMPLICATIONS

(a) Corporate Plan and 10 Year Plan (Local Outcomes Improvement Plan (LOIP))

Promote economic development and growth and maintain and promote Moray's landscape and biodiversity.

(b) Policy and Legal

The application is made for consent under S.36 of the Electricity Act 1989 to Scottish Government. If consented, planning permission is deemed to be granted for the development. For planning purposes proposals require to be determined in accordance with the development

plan unless material considerations indicate otherwise. If granted by Scottish Government, the responsibility for the discharge of (planning) conditions attached to the formal decision to grant consent will pass to Moray Council.

(c) Financial implications

If Moray Council agrees to object to the proposal, a Public Local Inquiry would be arranged by Scottish Government. Moray Council would be expected to attend and participate in the Inquiry process, including any pre-Inquiry arrangements with resultant costs, including officer, legal representation and consultant costs where required/appropriate.

At Inquiry, the applicant may seek an award of costs against the Council if it is considered the Council has acted unreasonably.

(d) Risk Implications

If the Council decide not to respond within the agreed period it would be open to Scottish Government to proceed and determine the application.

If deciding to object, the outcome of any Public Local Inquiry held to consider this proposed development is uncertain: it might uphold and support the Council's decision to object, but equally the objection could be dismissed and consent granted for the development.

(e) Staffing Implications

In the event of a Public Local Inquiry, staff time and resources (planning and legal officers) will be required for preparation and attendance at any Inquiry.

(f) Property

None.

(g) Equalities/Socio Economic Impact

None.

(h) Consultations

The Corporate Director (Economic Development, Planning & Infrastructure), the Head of Development Services, the Legal Services Manager, the Equal Opportunities Officer, the Development Management and Building Standards Manager, the Transportation Manager, Gary Templeton (Principal Planning Officer) and Lissa Rowan (Committee Services Officer) have been consulted and comments received have been incorporated into the report.

5. CONCLUSION

- 5.1 From Appendix 1, the planning merits have been considered relative to current development plan policy and material considerations, including the wind energy supplementary planning policy guidance and wind energy landscape capacity study approved by the Council.**

- 5.2** Whilst national policy provides support for renewable energy proposals the proposal is not considered to comply with the Moray Local Development Plan 2015 policies and guidance. Aspects of national guidance in relation to landscape impact have also been departed from.
- 5.3** Notwithstanding the material considerations advanced by the applicant (including matters identified in the submitted EIA Report) on balance, Officers would make the following recommendation that would form the basis of the response to the ECU (as stated in Appendix 1 and repeated below).
- 5.4** The proposed development is contrary to Moray Local Development Plan 2015 policies PP1 Sustainable Economic Growth, T2 Provision of Access, ED7 Rural Business Proposals, ER1 Renewable Energy Proposals, E7 Areas of Great Landscape Value and Impacts Upon the Wider Landscape, IMP1 Developer Requirements, IMP2 Development Impact Assessments and Moray Onshore Wind Energy 2017 Policy Guidance and The Moray Wind Energy Landscape Capacity Study 2017 for the following reasons:-
- I.** Many of the turbines would be located close to the edges of, and outwith, the areas of potential for larger turbines within Landscape Character Type (LCT) 10. The proposed turbines would by virtue of their size and positions have significant adverse effects and dominate the smaller scale upland fringes in the Upper Knockando area.
 - II.** The proposal would be inappropriate in terms of its significant adverse impacts on landscapes and views within Moray. Views from varying distances such as those from Ben Rinnes, Ben Aigen and the A95 south of Aberlour would excessively diminish the recreational and visitor experience where the countryside would be overly populated with windfarm developments.
 - III.** The proposal would increase the influence of wind energy development in views north from within the Spey Valley Area of Great Landscape Value (AGLV). As development must not diminish the landscape quality within this designation the policy directly guides wind energy development proposals to compliance with the 2017 Moray Wind Energy Landscape Capacity Study (MWELCS). The proposal departing from the MWELCS therefore has an unacceptable impact upon the AGLV where the landscape would be detrimentally affected.
 - IV.** The proposed windfarm would result in complex and unacceptable cumulative views of wind energy development. These cumulative views are illustrated in the various Cumulative Zones of Theoretical Visibility figures. The proposed windfarm from varied locations within Moray would bring into view an agglomeration of windfarms, constructed or consented. This would result in significant adverse cumulative effects upon the landscape and upon visual amenity resulting in the creation of a windfarm landscape.
 - V.** The submitted information is inadequate to satisfy policies T2 and IMP2 as it is insufficient to enable Moray Council to consider; the

feasibility of the proposed development in terms of the ability to deliver turbine components, the impact on the public road network and the identification of appropriate mitigation/modification or improvements necessary for the proposed development. Furthermore additional information would be required in relation to how the volumes of construction stone beyond that gleaned from on-site borrow pits have been calculated.

Author of Report: Neal MacPherson, Principal Planning Officer

APPENDIX 1

MORAY COUNCIL

Response to Consultation issued by Scottish Government on APPLICATION FOR S.36 CONSENT ERECT 29 WIND TURBINES WITH BLADE TIP HEIGHT BETWEEN 149.9 AND 225 METRES WITH INSTALLED CAPACITY IN EXCESS OF 50MW AT ROTHES III WIND FARM, MORAY

(MORAY COUNCIL REFERENCE 19/00156/S36)

INTRODUCTION

The applicant, Rothes III Limited has applied for consent under Section 36 of the Electricity Act 1989 for the proposed windfarm near the existing Rothes I & II windfarms, approximately 2.5km north of Archiestown, Moray.

The application will be determined by the Scottish Government Energy Consents Unit (ECU) and not by the Moray Council, as local planning authority.

In determining the Section 36 application, the views of the Moray Council, as local planning authority are being sought by the Scottish Government: the Council's role in the process is therefore as a statutory consultee. In responding with comments, the Council has a right to object or not to the application, as well as commenting on the conditioning of the consent. If the planning authority objects to the proposed development and the objection is not later withdrawn, or the areas of objection cannot be addressed by conditions then the ECU are likely to convene a Public Local Inquiry.

Prior to determination, the Scottish Government is responsible for affording publicity of the proposal and taking account of all representations received, whether from the general public or interested parties, and for consulting with agencies and organisations (consultees). Internal consultation with relevant Services/Sections of the Council has been undertaken in order to provide a comprehensive response in responding to the consultation.

THE PROPOSAL

- Erection of up to 29 wind turbines, 3 of a maximum height base to tip not exceeding 149.9m, 8 of a maximum height base to tip not exceeding 200m and 18 of a maximum height not exceeding 225 m.
- 26 of the 29 turbines will have mandatory aviation lighting (all turbines above 150m in height). The lighting is proposed to be radar activated and will become visible only when aircraft are in the vicinity.
- The precise output of the turbines is not yet known, as the final model and type has not yet been selected, but the applicant has indicated that the output is likely to be somewhere 100 - 200mW (depending upon available wind turbine technology).

- Permission is sought for a 35 year operating period from commissioning.
- Each turbine will sit upon a circular concrete foundation pad 26m in diameter.
- Each turbine location will have a crane and vehicle hardstanding at its base.
- Existing access tracks will be used from the Rothes I & II site entrance but additional access tracks will be formed throughout the site.
- 2 new control buildings would link to the cable network within the site and also host welfare facilities served by a private water supply and a private septic tank. Each building is 10m wide, 20m long and 6m to ridge level.
- One or possibly two transformer housing may be positioned at the base of each turbine and measure 3x3x3m and have a shallow pitched roof. These metallic structures will be dark green in colour.
- Beyond the use of existing tracks 13.6km of new tracks will be formed and also 5.3km of upgraded access tracks.
- Up to 6 new borrow pits are proposed across the site.
- 2 temporary construction compounds and construction signage will be provided on site for an anticipated construction period of 18 months.
- Construction hours have not been specified by applicant but are anticipated to be between Monday to Saturdays. Other working outwith these periods, would be subject to specific agreement with the relevant consenting authority.
- Existing permanent anemometer masts in place will be used for wind monitoring, with no new masts proposed.
- Proposed new storage/workshop shed near existing Rothes I & II compound at the west side of Rothes II windfarm will measure 12.8m wide, 19m long, 5.7m to eaves level and 8.3m to ridge level (pitched roof).
- Substantial compensatory planting, tree felling and re-stocking proposed. Whilst the specific compensatory planting details are not provided an area is identified for possibly compensatory planting.
- A micro-siting allowance of 50m for the turbines and site infrastructure is sought.

THE SITE

- The site is located approximately 2.5km north of Archiestown, approximately 5.5km south west of Rothes and adjacent to the existing operational windfarms known as Rothes I and Rothes II.
- The development area is approximately 1,779 hectares in area.
- Once operational the windfarm will be accessed via the existing Rothes I and Rothes II windfarm entrance onto the minor public road C13E where the existing windfarm site offices are. Construction deliveries would be concentrated upon the existing access onto the A941 at Gedloch and the anticipated delivery route of components is via Inverness-Elgin-Gedloch.

- The windfarm area site is not subject to any international, national, regional or local landscape, built environment or nature conservation designations, but there are several archaeological assets within the site. “Gull Nest” which is a biological Site of Scientific Special Interest (SSSI) lies immediately to the north east of the site. Groundwater dependent Terrestrial Ecosystems (GWDTE’s) are present on site.
- No part of the site would lie within the Area of Great Landscape Value (AGLV) designation which lies 5km to the south and south east and also lies approximately 16km north east of the Cairngorms National Park.
- The Burn of Rothes/Mannoch Road Core Path sits partly within the north eastern boundary of the windfarm site. A Right of Way from Upper Knockando towards Burnie also runs north-south through the site (known as the Lower Mannoch Road).
- Carn na Cailliche is a designated landmark hill within the adopted Moray Onshore Wind Energy 2017 Policy Guidance (MOWE). The site sits entirely within Landscape Character Type (LCT) 10 Upland Moorland and Forestry identified within the Moray Wind Energy Landscape Capacity Study 2017 (MWELCS).
- It is noted that the site boundary extends to cover the two possible access routes into the site, both leading to the public road network (A941 to the east and the C13E to the west).
- There are a number of windfarms (operational and consented) close to the proposed windfarm site. Most notably Rothes I and Rothes II are located immediately north of the proposed site and will be served by roads leading from Rothes II.

HISTORY

For the site.

17/01706/S36SCO - Environmental Impact Assessment (EIA) Scoping for Rothes III undertaken for Electricity EIA Regulations to establish the ‘scope’ and content of the EIA Report. Scoping Opinion issued by the ECU in November 2017. In this response the need to thoroughly demonstrate how very large turbine components could be delivered within any EIA Report was highlighted. The Scoping response also highlighted the limitations of this Landscape Character Type and asked the EIA Report to address/rationalise any deviation from this if higher taller turbines were proposed.

Relevant wind energy developments in the wider area.

01/02055/S36 - Construct and operate wind powered electricity generating station (28 turbines and ancillary equipment and works) at Paul's Hill, Ballindalloch, Banffshire. Approved by the Scottish Government in spring 2003. Moray Council did

not object to the proposed windfarm. Rothes III would be located approximately 9km north east and east of this site.

02/02099/EIA - Construct 21 x 110m turbines at Hill of Towie, Knockan and McHattie's Cairn Drummur. This development was approved in 2005 at appeal and is located 12km east of Rothes III.

03/01426/S36 – Section 36 application to an extension to already consented windfarm (increase individual turbine capacity from 2mW to 2.3mW) at Paul's Hill windfarm comprises of 28 turbines, each 100m to blade tip. Pauls Hill has been operational for approximately 13 years.

04/02473/S36 - Section 36 application for a wind farm at Berry Burn, Altyre Estate, Forres, Moray. 29 turbines at 104m in height. Operational since 2014 and producing approximately 66mW. This windfarm is located approximately 9km to the west of the proposed site, with the proposed Clash Gour windfarm in the similar vicinity.

07/02800/S36 - Extension of wind farm at Rothes Wind Farm - consent granted under S.36 of the Electricity Act 1989 by Scottish Ministers for 18 turbines, 125m high to blade tip, 80m rotor diameter (Rothes II). Now operational located immediately north of the proposed windfarm. The proposed storage shed will be located within this windfarm, close to the existing welfare building/substation.

13/00053/EIA - Erect 12no wind turbines (rotor diameter 71m) at Hill of Glaschyle, Dunphail, Forres, Moray. Application allowed at Appeal by Ministers in April 2014 (see 15/01148/APP below). Located 14km west of the proposed windfarm.

13/00615/EIA - Erection of 4 wind turbines (110m high to blade tip (70m hub height, rotor diameter 80m)) and associated infrastructure at Kellas House, Kellas (consented but not yet constructed, works commenced). This is located 4km north of Rothes III.

13/02057/S36 - Erect 16 wind turbines (125m to blade tip) at Hill of Towie Windfarm, known as Hill of Towie II. Located immediately south of the existing Hill of Towie windfarm, these turbines were approved in 2017 but have yet to be constructed. They are located 11km east of Rothes III.

14/01087/EIA - Erection of wind farm comprising 6 wind turbines 126.5m high to tip and associated access track and ancillary infrastructure erection of 1no permanent anemometer mast temporary formation of construction compound and erection of 2 no temporary anemometer masts at Meikle Hill, Dallas (see 17/01003/APP below). This located 4km north west of Rothes III.

15/01148/APP - Section 42 application to amend Condition 4 of application 13/00053/EIA (as consented at appeal dated 18/03/2014) to allow for revised turbine model (from Enercon E70 to E82) increasing maximum blade tip height from 99.5m

to 99.91m and increasing rotor diameter from 70m to 82m at Hill of Glaschyle, Dunphail, Forres. Approved by Committee in October 2015.

17/01003/APP - Variation of conditions 3, 7, 14, 20, 24 and 25 of planning permission 14/01087/EIA for Meikle Hill, Dallas. Approved by Committee in October 2017 and effectively extends permission for a further 5 year period. Not yet constructed.

17/01509/APP - Amend condition 8 (aviation lighting) of the associated permission to allow the use of infra-red lighting at Hill Of Glaschyle, Dunphail, Forres, Moray. Approved in December 2017. New lighting has now been implemented.

Pending applications

18/00523/S36 - Proposed wind farm comprising of 7 wind turbines 6 of a maximum height base to tip not exceeding 149.9m and 1 of maximum height not exceeding 134m external transformer housing site tracks crane pad foundations underground electricity cable control building temporary construction and compound 2 borrow pits associated works/infrastructure and health and safety signage at Paul's Hill II Wind Farm, Ballindalloch. Located 8km south west of Rothes this proposed wind farm extension is to be considered at a Local Public Inquiry in September this year.

18/01591/S36 - Erect 48 wind turbines with blade tip height between 130 and 176 metres with installed capacity in excess of 50MW at Clash Gour Wind Farm. This proposed windfarm located 7km west of Rothes III is currently with the Energy Consents Unit. Moray Council objected to this proposed windfarm earlier in 2019.

A number of other windfarms exist within Moray further to the east and south east, which have all been given appropriate consideration in the recommendation put forward below.

In Scoping (EIA scoping has been undertaken for the following proposals).

Berryburn II scoping submitted to the Scottish Government for up to 10 turbines at a height up to 149.9m in height. This would constitute an extension to the existing Berryburn windfarm and would be located immediately adjacent to the proposed Clash Gour windfarm.

Within Highland

Cairn Duhie – Permission was issued by Scottish Ministers in October 2017 for 20 wind turbines at a height of 110m. This site lies 18km west of Rothes III within Highland. This site has recently been constructed.

Ourack – Up to 50 turbines, but no height specified at present. This site sits 10km south west of Rothes III and a scoping opinion was issued by the Energy Consents Unit in February 2016. No application has come forward to date.

ADVERTISEMENTS

Advertisements will have been carried out by the ECU who is the determining authority for the application.

CONSULTATIONS

Development Plans ;–

Scottish Planning Policy (SPP)

SPP sets out a series of “Policy Principles” including:-

- A presumption in favour of development that contributes to sustainable development; and
- Planning should direct the right development to the right place.

In terms of onshore wind energy developments, Paragraph 161 of SPP requires that planning authorities should set out a spatial framework in the development plan which identifies those areas that are likely to be the most appropriate for onshore wind farms as a guide for developers and communities, following the approach set out in Table 1 of SPP. Table 1 is a form of sieve / constraints mapping identifying:-

Group 1: Areas where wind farms will not be acceptable.

Group 2: Areas of significant protection – Recognising the need for significant protection, in these areas wind farms may be appropriate in some circumstances. Further consideration will be required to demonstrate that any significant effects on the qualities of these areas can be substantially overcome by siting, design or other mitigation. Includes national and international designations, other nationally important mapped environmental interests and community separation for consideration of visual impact.

Group 3: Areas with potential for wind farm development – Beyond Groups 1 and 2, wind farms are likely to be acceptable, subject to detailed consideration against identified policy criteria.

The Wind Farm Spatial Framework within the Moray Local Development Plan (MLDP) 2015 complies with Paragraph 161 of the SPP and identifies areas with potential for wind farm development. This is a broad-brush approach, offering the same approach for all scales of turbines above 35m to blade tip height and covers a significant land area of Moray, approximately 40% of the MLDP area. The proposed turbine locations overlaid on top of the Spatial Framework highlight that 23 of the turbines are consistent with the framework, but 6 turbines to the north-west are not.

However, the limitations of the very strategic Spatial Framework are recognised and Paragraph 162 of SPP further requires that local development planning authorities

“should identify where there is strategic capacity for wind farms, and areas with the greatest potential for wind development”. To address the requirements of Paragraph 162, the Council has more refined Policy Guidance Maps within the approved Supplementary Guidance (Map 1), which highlight that 18 of the turbines are consistent with potential development areas for extension and repowering, but 11 turbines to the south are not.

The proposal is not considered to support the principles of SPP highlighted above, constituting an unsustainable approach and the wrong scale and extent of proposal, as detailed below.

Renewable Energy (ER1)

Policy ER1 Renewable Energy Proposals sets out a comprehensive set of criteria to assess the details of the proposal against, with assessment of some criteria determined by consultee responses.

Proposals must be compatible with policies to safeguard and enhance the built and natural environment. They must also avoid or address any unacceptable significant adverse impacts including landscape and visual impacts, impact on peat land hydrology and watercourse engineering.

Policy ER1 is considered to be consistent with SPP having been subject to Examination and a hearing procedure as part of the preparation of the MLDP 2015. This was reflected in the Reporter’s findings in the MLDP 2015 Examination Report which added wording to Policy ER1 stating:-

“Further detail on the above assessment process will be addressed through supplementary guidance to include:-

- *Peat mapping once this becomes available.*
- *Detailed mapping of constraints.*
- *Guidance on areas with greatest potential for small/ medium and large scale wind farms.”*

The policy requires that the *“proposal addresses the [Moray Onshore Wind Energy Policy] Guidance set out in the Moray Windfarm Landscape Capacity Study”*. The proposed development is considered to fail the test that *“the landscape is capable of accommodating the development without significant detrimental impact on the landscape character or visual amenity”*, for the reasons outlined below.

The proposal is also considered to be contrary to the requirement that *“the proposal is appropriate to the scale and character of its setting, respects the main features of the site and the wider environment and addresses the potential for mitigation”*. The proposal is therefore contrary to Policy ER1.

Officer note – as the matter compliance with the Moray Onshore Wind Energy Policy Guidance and Landscape Capacity Study (2017) is discussed in depth in the body of the committee report observations section, the comments of the Development Plan

team will not be repeated in this summary of their internal consultation.

Sustainable Economic Development (Policy PP1)

Policy PP1 Sustainable Economic Growth states that proposals will be “supported where the quality of the natural and built environment is safeguarded.” While the proposal would provide a sustainable renewable energy source, the sustainability of the proposal has to be considered in its wider context and in this case, the scale, extent and resultant landscape and visual impact is considered to be an unsustainable proposal in terms of Moray’s natural heritage as well as potentially adversely affecting Moray’s tourism industry and the resultant economic impact. The proposal is therefore contrary to Policy PP1.

Woodland (Policies E4 and ER2)

Bar the western section (containing 7 turbines on the open hill ground on Carn na Cailliche), the site is covered predominately in commercial conifer plantation.

The proposed development will require the total removal of approximately 252.8ha of woodland (infrastructure, windfarm edges and peat land).

The Applicant has confirmed that 65.75ha of compensatory planting will be provided and that details of the compensatory planting will be provided pre-construction for approval by the Planning Authority, Forestry Commission Scotland and SNH.

The Applicant has advised that 12.9ha of removal relating to the windfarm edges, in order to reduce the risk of subsequent wind blow, will be replanted. However, no details have been provided to identify the area in which these will be replanted.

The Applicant states that areas of Sitka spruce are to be “removed from inappropriate deep peat sites” and that some of this will be restored to peatland. The size of this area is contradictory referred to within Chapter 11: Forestry of the Environmental Impact Assessment Report (EIAR) Volume 2 as being 80.6ha (para. 11.3.8) and then 100ha (para. 11.10.2). It is intimated that not all of this removal will be replaced and no detail has been provided to identify the area(s) in which these trees will be replanted.

Until further information is provided in respect of the compensatory planting in respect of the windfarm edges and areas of Sitka spruce, the proposal is contrary to Policies E4 Trees and Development (and associated Supplementary Guidance) and ER2 Development in Woodlands.

Officer Note – see observations section below regarding the Impact on Woodland.

The Council has a compensatory planting process and an agreement for delivery is in place with the Woodland Trust, however, the applicant has not discussed this matter with the Council.

Areas of Great Landscape Value (AGLV) and impacts upon the wider landscape (Policy E7)

The proposal will have a significant adverse effect on part of the Spey Valley AGLV and on the wider landscape and the proposal is therefore considered to be contrary to Policy E7 (see below and landscape advisor's report).

The policy also requires proposals which involve the creation of new hill tracks to ensure that their alignment minimises visual impact, avoids sensitive natural heritage features, avoids adverse impacts upon the local hydrology and takes account of the likely type of recreational use of the track and wider network.

As part of the MLDP 2020 Proposed Plan (see below), the current AGLVs are being replaced with a suite of Special Landscape Areas (SLA's). The Council's appointed landscape advisor considers that the Spey Valley SLA would be significantly and adversely affect by the proposal.

Waterbodies (Policy EP6)

There are a number of waterbodies on, and in the immediate vicinity, of the site. Further information has been requested in relation to watercourse crossings and run-off. As it has not been demonstrated that there will be no adverse impacts upon the water environment throughout construction, operation and decommissioning, the proposed development is contrary to Policy EP6 *Waterbodies*.

Officer Note – see observations section below. Notwithstanding this departure issue. The final design and position of the culvert crossing will be subject to micro siting, so a condition allowing for final approval of the proposed crossings. A condition to this effect could be attached in the event of approval

Built Heritage (Policy BE1, BE2 and BE5)

The proposal must ensure that any development does not take place in a location likely to have a negative impact on a scheduled building or monument, a national or local designation, a listed building or any sites of archaeological importance. There are a number of archaeology sites and listed buildings within a 10km radius of the proposed site.

The Aberdeenshire Council Archaeology Service has been consulted and has confirmed that the mitigation is appropriate for the proposed development. They have requested that conditions be applied for the provision of an Archaeological Written Scheme of Investigation (WSI), a programme of archaeological works and, if required, a Post-Evacuation Research Design (PERD). On the basis that these conditions are applied to any consent, the proposal complies with Policies BE1 Scheduled Monuments and National Designations, BE2 Listed Buildings and BE5 Battlefields, Gardens and Designed Landscapes.

MLDP 2020 Proposed Plan

At its special meeting on 18 December 2018, the Planning & Regulatory Services Committee approved the Moray Local Development Plan (MLDP) 2020 – Proposed Plan and agreed that it be treated as a material consideration, with limited weight at this time, for development management purposes as of 1 February 2019. As the Proposed Plan progresses through to adoption, greater weight as a material consideration will be applied, as determined by the Manager (Development Management) and the Principal Planning Officer (Development Plans).

Policy ER1 has largely been carried forward as Policy DP9 Renewable Energy in the Proposed Plan with some minor wording changes. As stated above, the current suite of AGLVs will be replaced with a suite of SLAs, which have been identified in the Proposed Plan with a new policy to support them. In terms of the Spey Valley SLA, the Moray Local Landscape Designation Review identifies sensitivities to change including “wind energy development sited in adjacent upland areas and visible on prominent skylines which would affect the character and views from this well settled and visited valley”.

Officer note – while reference to the proposed changes to the AGLV designation to differing SLA's is noted, given the status of the proposed local development plan, the current Section 36 consultation will refer solely to the adopted Moray Local Development Plan 2015.

Conclusion of Development Plans consultation.

The proposal is therefore not considered to support the principles of SPP highlighted above, constituting an unsustainable approach and the wrong scale and extent of proposal, contrary to the guiding principle of promoting the right development in the right place.

The proposal is considered to be contrary to a number of policies in the Moray Local Development Plan 2015, as it would result in unacceptable significant landscape, visual and cumulative effects. The Council's strategy recognises that Moray has limited further scope to accommodate large scale turbines as a result of the significant contribution the current operational and consented wind farms will make towards national targets for renewable energy generation. The proposal is considered to be unsustainable, resulting in unacceptable negative impacts upon Moray's landscape and potentially significant economic impacts. No opportunities for wind turbines greater than 150 metres to blade tip were identified in the Guidance or LCS, as it was considered that Moray's landscape had no capacity for such a scale of development.

Access Manager - in the event of approval the applicants proposed core path enhancements (inclusive of parking, signage and path improvement), protection of SPO1 core path and protection of the Old Mannocho Road Right of Way would have

to be demonstrated in a public access management plan (PAMP) and linked to the Construction Method Statement. The enhancements include a proposed link and loop using windfarm tracks linking SP20 and SP21 near Archiestown would be welcomed.

Environmental Health – The proposed development has been assessed on its contribution toward noise levels (inclusive of cumulative effects) in its locality. Given the various cumulative noise issues between the proposal and other wind energy developments/consents Moray Council commissioned a noise specialist to aid the Environmental Health Sections consideration of the proposed development. Following detailed consideration and validation of the noise calculations submitted, noise from the proposal can be addressed by appropriately worded conditions. In the event of approval, such conditions could be attached to ensure that noise levels are kept to an acceptable level. These conditions would include an allowance for any effects of Amplitude Modulation in the event it occurs.

In the event of approval other Environmental Health conditions would need to be imposed such as confirmation of the hours of operation, vibration and blasting (if proposed).

Environmental Health, Private Water – It is noted that no private water for the control building (and staff welfare) no specific water supply has been tested, if approved a suspensive condition would need to be attached. Environmental Health recommends that any Construction Environment Management Plan should include mitigation measures to protect private water supplies. Where a supply is adversely affected by the works, short-term contingency arrangements shall be implemented and, where necessary, a replacement adequate and wholesome supply shall be provided, e.g. connection to the public mains.

Environmental Health, Contaminated Land - No objection.

Aberdeenshire Archaeology Service - No objections to the development subject to a condition relating to consideration of an archaeological Written Scheme of Investigation (WSI). Should the archaeological works reveal the need for post excavation analysis the development hereby approved shall not be brought into use unless a Post-Excavation Research Design (PERD) for the analysis, publication and dissemination of results and archive deposition has been submitted to and approved in writing by the planning authority.

Transportation Manager – It is noted that abnormal roads are intended to be taken from the Inverness direction, via Elgin to the site on the A941. The EIA Report and relevant appendices do not suitably demonstrate that all the proposed wind turbine components (with blade lengths of up to 75m in length) could be delivered to site. Even at smaller component lengths of 63.5m there are constraints on the public road network. Further information would be required to assess the feasibility of delivering the proposed components.

Transportation considers that the supporting information submitted is inadequate to comply with policies T2 and IMP2 of the Moray Local Development Plan 2015. The information is insufficient to enable officers to consider the feasibility of the proposed development in terms of the ability to deliver turbine components, the impact on the public road and the identification of appropriate mitigation/modification or improvements necessary for the proposed development.

Further information required to consider the application;-

1. A review of the full route(s) for component delivery within Moray needs to be provided including swept path analysis for all abnormal indivisible load (AIL) components, existing road constraints and conditions. This is required to demonstrate that the route to the development can accommodate the delivery vehicles, construction traffic and to identify where mitigation will be required. The assessment shall include:

- Details (Plans 1:100 minimum) for each of the turbine components, delivery vehicles including details of load dimensions, gross weight and axle weights.
- A review of the full component delivery route(s) to identify constraints including road widths, height and weight restrictions etc. Proposed locations for detailed swept path analysis and identification of any bridges/structures, street furniture, utilities or vegetation which may be impacted.
- Vehicle swept path analysis through all points of constraint on the network (vertical and horizontal swept paths as required)
- Details of the proposed temporary and permanent mitigation works required as a result of the swept path analysis.
- Identification of existing roads culverts, ditches and bridges and any measures or mitigation proposed to ensure they remain in full working order without capacity restrictions.

2. Supporting information required to demonstrate a robust assessment of the estimated volume of material to be sourced from on-site borrow pits.

Developer Obligations - None sought for wind energy proposals. Community Benefit considered separately to the planning system.

Moray Flood Risk Management (MFRM) – The site is not susceptible to any significant flooding and following consideration of the information provided the MFRM team raise no objection. A condition would be required for the final, definitive designs and calculations of all watercourse crossings to MFRM team to confirm that post development run-off rates do not exceed pre-development run-off rates, or increase the risk of flooding to surrounding watercourses, or downstream. Evidence required showing that any development on the site does not affect the flow of the watercourses changing the catchment of the watercourse.

Building Standards – A Building Warrant will be required for the control building and the foul water treatment.

REPRESENTATIONS

All objections/representations in the relation are to be submitted directly to the Scottish Government Energy Consents Unit, who is the determining Authority. It is understood that 384 representations (and 1 supporting comment) from the public have been received in relation to the proposals. They will be considered by the ECU and do form part of the Moray Council consideration (as consultee to the Section 36 process).

OBSERVATIONS

The proposed Rothes III Windfarm seeks consent under Section 36 of the 1989 Electricity Act and also a direction under Section 57(2) of the Town and Country Planning (Scotland) Act 1997 as amended for the development to be deemed to be granted.

The proposal was scoped previously (see history section) under the 2000 Electricity Works (Environmental Impact Assessment) (Scotland) Regulations, and as such the application has been submitted with a supporting EIA Report with accompanying Appendices and other supporting information such including Pre Application Consultation (PAC) report, Non-Technical Summary, and a Planning Design and Access Statement. Chapter 17 Summary, Residual Effects and Mitigation at the end of the EIA Report summarise the various mitigation measures required or that have been imbedded in the design of the development.

As the Moray Council is a consultee for the Section 36 process, some matters within the Observations will be assessed differently had it been assessed as a planning application where the Moray Council are the determining authority. Matters such as, for example, impact on aviation and the water environment will be informed by direct consultation with the Ministry of Defence or SEPA, as they will be consulted separately and will reply directly to the ECU. Similarly detailed consideration of ornithology will be best commented upon by consultees such as the RSPB and SNH. The Councils consideration of some matters will therefore be less involved where the ECU are consulting directly themselves on particular areas of interest best addressed by other specialist consultees.

Legislative Context

For consent under Section 36 of the Electricity Act 1989, the decision-making process specified under Section 25 and 37 (2) of The Town & Country Planning (Scotland) Act 1997, as amended is not a statutory requirement. However, the local development plan would remain a significant material consideration, but does not take primacy as would be in the case of a planning application. It and all other

material considerations are given the appropriate weighting in the consideration of the Section 36 consultation requests from the ECU. On 18 December 2018, at a special meeting of the Moray Council Planning and Regulatory Services Committee, the Proposed Plan was approved as the “settled view” of the Council and minimal weight will be given to the Proposed Plan, with the 2015 MLDP being the primary consideration. Its policies are included for reference at the end of this Appendix for reference, in general terms the policy position and criteria for renewable energy proposals relatively similar between the current and proposed local development plans.

Pre Application Consultation (PAC)

Prior to submitting the Section 36 application the applicants undertook extensive consultation with various community groups and communities and have submitted with the EIA a Pre Application report summarising the details and outcomes of the public consultation undertaken.

Public exhibitions were held on the 3rd, 4th, 5th and 6th of July 2018. These took place in Dallas at the Houldsworth Institute (3rd July); Rothes at the Grant Hall (4th July), Archiestown at Archiestown Village Hall (4th July), Aberlour at the Fleming Hall (5th July) and Elgin at the Community Centre (6th July). A total of 33 members of the public attended the exhibitions. The PAC report identifies the main concerns expressed by respondents were the visual impact and the cumulative visual impact of the wind farm including the height of the turbines; the impact on wildlife particularly black grouse and capercaillie. There was also concern expressed in relation to the proximity of the proposed development to local residents. These matters are all fully addressed within the Environmental Impact Assessment (EIA) Report. Feedback on the standard of presentation and helpfulness of the project information advisers presented at the exhibition was positive and signalled their satisfaction that sufficient information was supplied to understand what the proposed development entails.

Positive feedback was also received from the questionnaires on the positive socioeconomic impacts that wind farms create, such as potential work for local businesses. Indeed, a representative from Leiths (Scotland) Ltd attended the exhibition. Leiths operate a number of quarries in the area and could potentially benefit with the sale and transport of aggregate during the construction of the wind farm.

Further consultation was held in relation to Community Shared Ownership, but this is separate and in addition to the main pre-application public consultations undertaken.

The applicant states that they have sought to address/incorporate feedback from the pre-application consultation process as evidenced in Chapter 3 Site Selection and Design Evolution of the EIA Report. It is acknowledged that the design has been modified and improved since the consultation was undertaken.

The main planning issues are considered below.

Relationship of proposal to national renewable energy policy/guidance

International and UK policy frameworks are generally supportive of renewable energy proposals which help to facilitate a transition to a low carbon economy. National Planning Framework (NPF3) for Scotland sets out the spatial strategy for Scotland's development. NPF3 makes specific reference to onshore wind energy having an important role in delivering the commitment to a low carbon energy generation.

The Climate Change (Scotland) Act 2009 places a duty on public bodies to act sustainability and meet emissions targets including a requirement to achieve at least an 80% reduction in greenhouse gas emissions by 2050 (over 1990 levels). This figure is likely to increase to 90% by 2050 when the Climate Change Bill, published in June 2017 becomes legislation.

The commitment to the creation of a low carbon place is reiterated in Scottish Planning Policy. The applicants submissions regard national policy as being significant and supportive of this proposal where this development, as a proven technology providing a source of safe and locally produced renewable energy for many years, will make a significant contribution towards renewable energy production at the national and local level. Whilst it is noted that some targets have been met for renewable energy production it is noted that the Scottish Governments guidance in pursuit of renewables has not diminish support for renewable energy proposals.

The applicants have submitted a Planning, Design and Access statement which identifies the pertinent national policy and guidance in relation to the onshore wind energy proposals. Consideration has been given to these various policies and guidance documents. Of particular note there is a recurring theme in favourable of renewable energy proposals.

Scottish Planning Policy (SPP) requires that “planning should direct the right development to the right place”, which is an important issue in this proposal. The policy principles set out for “Delivering Heat and Electricity” in SPP *include*;

- Support the transformational change to a low carbon economy, consistent with national objectives and targets.....
- Support the development of a diverse range of electricity generation from renewable energy technologies- including the expansion of renewable energy generation capacity and the development of heat networks
- Guide developments to appropriate locations and advise on the issues that will be taken into account when specific proposals are being assessed.

(SPP) requires planning authorities to set out in the development plan a spatial framework identifying those areas that are likely to be most appropriate for onshore wind farms as a guide for developers and communities, following a set methodology (para 161). This has been done through the spatial framework included within the Moray Local Development Plan 2015, with the proposal site partially located within an area with potential for wind farm development of turbines over 35m to tip height, with no upper height limit identified. This is a broad-brush approach required to comply with Scottish Planning Policy and covers approximately 40% of the Moray Local Development Plan Area.

SPP (para 162) recognises the limitations of the strategic spatial framework and further requires that local development planning authorities should identify where there is strategic capacity for wind farms and areas with the greatest potential for wind development.

Following Examination of the Proposed Moray Local Development Plan 2015 (MLDP), the wording of the policy was amended by the Reporter to state that “further detail on the above assessment process will be addressed through supplementary guidance to include:

- Peat mapping once this becomes available
- Detailed mapping of constraints
- Guidance on areas with greatest potential for small/ medium and large scale wind farms.”

The detailed mapping of constraints and guidance on areas with greatest potential is set out in the Moray Onshore Wind Energy Guidance 2017 (MOWE), with the proposal site located partially within an area identified as having opportunities for extension and repowering. Of note, the 2017 MOWE was approved following consultation and an amendment introduced by the Scottish Government and is therefore in accordance with current national guidance.

Renewable Energy Proposals (ER1)

Policy ER1 Renewable Energy Proposals sets out a comprehensive set of criteria to assess the details of the proposal against, with assessment of some criteria determined by consultee responses. The policy in recognising the contribution of renewable energy to wider national carbon reduction targets and benefits to the local economy view favourably wind energy proposals subject to criteria discussed below.

Proposals must be compatible with policies to safeguard and enhance the built and natural environment. They must also avoid or address any unacceptable significant adverse impacts including landscape and visual impacts, traffic, tourism/recreation interests, impact on peat land hydrology and watercourse engineering. These matters will be addressed below under the relevant headings, many of the criteria

within ER1 have been satisfied or can be satisfied via condition in the event that the development was ultimately consented.

The applicant has advised that the grid connection point and precise route of cabling has not yet been determined. As stated in the supplementary guidance, grid connections should be considered when the project is at an early stage so that the environmental effects can be considered fully. The Council's preference is for connections to be underground. Where undergrounding is deemed unviable, the alternative options must be supported fully by evidence that clearly shows that the alternative option chosen is the best method of connection. As no details have been provided in respect of connection to the grid, the environmental effects cannot be assessed, although given the size of the proposed windfarm this may likely be subject of a separate Electricity Act Section 37 application. If this were the case, Moray Council would be consulted.

Landscape and Visual Impact Assessment LVIA (PP1, ER1 and IMP1)

MLDP Policy ER1 Renewable Energy Proposals favourably considers renewable energy proposals where they meet set criteria, including the need to safeguard the built and natural environment and avoid or address any unacceptable significant landscape and visual impacts. The policy states that the council is likely to support onshore wind turbine proposals in areas with potential (as identified in the Spatial Framework) subject to detailed consideration through assessment of the details of the proposal, including its benefits and the extent to which it avoids or mitigates any unacceptable significant adverse impact.

Policy IMP1 Developer Requirements requires any development to be sensitively sited, designed and serviced, and integrated into the surrounding landscape.

Landscape and Visual Impact Assessment (LVIA) for onshore energy proposals in Moray is assessed by the Moray Onshore Wind Energy 2017 Policy Guidance (MOWE) and The Moray Wind Energy Landscape Capacity Study 2017 (MWELCS) which is a technical appendix to the MOWE.

Detailed mapping of constraints and guidance on areas with greatest potential is set out in the Moray Onshore Wind Energy (MOWE) Policy Guidance 2017. This is adopted Supplementary Guidance forming part of the statutory Local Development Plan and the Landscape Capacity Study is a material consideration, referenced in policy ER1.

The Strategy within the Guidance states that Moray enjoys a very high quality and diverse natural and built environment, which must be safeguarded from inappropriate developments.... and "there is very limited scope to accommodate further large scale wind turbine developments in Moray in landscape and visual terms."

Moray Council have been involved in the consultation process, commenting on design iterations at pre-scoping to application stage. Comments made by the Council

on the developing proposal are summarised in Table 3-1 of the EIA Report. The key concerns of the Council were the size of the turbines and their location towards the edges of more extensive upland areas where they would significantly and adversely affect recreational routes, roads and settlement. It is noted that subsequently modifications to the design and layout were made, prior to application to improve aspects of the matters raised. The extent to which the current design is acceptable is discussed below. The Scottish Onshore Wind Energy Statement 2017 (SOWE) states that the Scottish Government expects developers of such projects to make every effort to find opportunities to collaborate, and to reduce potential local landscape impacts. At the pre application stage and scoping stage the applicants were told that turbines as high as 225 metres would likely be of an excessive height and would impact upon the local landscape. The design iterations in Chapter 3 Site Selection and Design Evolution of the EIAR have failed to arrive at a well-designed proposal or choice of turbine height.

Operational wind farms are considered to form the landscape and visual baseline with the Paul's Hill, Rothes I and II developments considered to have greatest potential to incur significant adverse effects in combination with this proposal. Cumulative effects with consented and application-stage wind farms are considered later in this report.

Effects on landscape character

The Council agrees with the LVIA set out in the EIA Report those effects on the *Upland Moorland and Forestry* LCT would be significant. While the operational Rothes I and II wind farms are located in this LCT, this proposal would substantially extend wind farm development and also introduce much larger turbines to this landscape. Although much of this landscape has a larger scale and simple landform and land cover, which reduces sensitivity to larger wind turbines, not all this LCT has these key characteristics (contrary to the description in paragraph 8.7.14 of the EIA Report). The lower hill fringes in the Upper Knockando area, which lie at the transition with the *Broad Farmed Valley* LCT, feature dispersed settlement, farmland and small woodlands which reduce scale and increase the diversity of the landscape. I consider that the scale of this proposal would dominate these smaller scale upland fringes and contribute to the significant adverse impacts that would occur on the *Upland Moorland and Forestry* LCT.

The Council agrees with the LVIA that effects on other LCTs would not be significant, with the exception of the *Broad Farmed Valley* LCT. While operational wind farm development is already visible on containing skylines in views from parts of the *Broad Farmed Valley* LCT, this proposal would introduce a greater extent of wind farm development with very large turbines prominent on the backdrop of hills to the north-west of the Spey. The operational wind farms of Berry Burn and Rothes I and II are barely noticeable from the *Broad Farmed Valley* LCT and while the Paul's Hill wind farm is more visible, views are infrequent with this development benefitting from

the containment provided by Roy's Hill. This proposal would incur significant and adverse effects on the character of this landscape, appreciated from more open and elevated valley sides but with also a small part of the highly sensitive narrow incised valley floor of the Spey.

Effects on designated and other valued landscapes in Moray

The more incised lower sides and floor of the Spey Valley are currently designated as an Area of Great Landscape Value (AGLV). There is no citation for this AGLV. Although landform and woodland would be likely to screen the proposal from much of the narrow, incised valley (floodplain and immediate side slopes) of the Spey, there would be occasional views from parts of this area (as represented by Viewpoint 18 Blacksboat Bridge). The character of settled and more open hill slopes below the upper Knockando area would be significantly and adversely affected as would the more distant slopes and hill tops lying to the south-east of the Spey within the AGLV. There would be significant adverse effects on part of this extensive AGLV.

Effects on visual amenity

The Landscape and Visual Impact Assessment (LVIA) within (Chapter 8 and associated appendices of the EIA Report) found that significant effects would occur on representative viewpoints 4, 5, 6, 7, 11 and 18 (Table 8.5). However, there is an anomaly between the LVIA set out within the main body of the EIA Report and Appendix 8.3 Visual Assessment, in that the effect from Viewpoint 13 from the Duke of Gordon Monument in Elgin is concluded to be significant (A8.3.116) in this appendix but is not listed as being so in the main body of the EIA Report in Table 8.5.

The LVIA concludes that the proposal would have significant effects on sections of the A95, A9102 and A9010 roads. Effects on settlements would not be significant although views from footpaths close to the proposed development (Core Path SP20 and Right of Way GM7) would be significantly affected.

In general, the visual assessment set out in the LVIA provides a well-considered assessment of visual effects although in some instances the judgements made on sensitivity of visual receptors from roads and footpaths are under-estimated, for example from viewpoint 11 West of Archiestown and from Core Paths and Rights of Way (all considered to be of low sensitivity in the LVIA).

General visibility

The upland plateau within which the proposal is sited forms a shallow basin in the area of the site and this helps to partially screen the full height of turbines and reduce visual impact, generally in more distant views from the north and north-east. The operational Rothes I and II turbines also reduces the impact of this proposal in views from the west and north-west as they lie closer to these areas. This can be seen in Viewpoints 9 at Dallas Castle and Viewpoint 10 from the Dallas/Knockando

minor road. While the effects of this proposal will be adverse from these views due to the greater density and presence of overlapping turbines resulting in a congested appearance, they would be unlikely to be significant as Rothes I and II are closer and more prominent. The addition of this proposal with the Rothes I and II operational turbines, however, greatly increases the extent of turbine development seen on the skyline of these uplands in views from the north across the well-settled Moray plain although these views are, in the main, more distant thus reducing impact to some degree.

Key significant effects on views

The Council agrees with the findings of the LVIA that the effects of the proposed wind farm on views from EIA Report representative Viewpoints 4, 5, 6, 7, 11 and 18 would be adverse and significant. There would be likely to be significant adverse effects on views from Viewpoint 13 at the Duke of Gordon Monument in Elgin (see above note above on the anomaly between the main body of the EIA Report and the LVIA appendix in relation to effects from this viewpoint).

It is considered that the key visual effects of the proposal are:

- Views from part of the Spey Valley, as represented by Viewpoint 18 at Blacksboat Bridge crossing the Spey. The proposal will be seen in the context of the intimately scaled inner Spey valley and significantly detract from the existing focus provided by the river and its parting around the low wooded island in the foreground of the view from the bridge where it spans the river. The viewpoint has been positioned not on the part of the bridge directly above the Spey but to the west of it. A greater extent of the wind farm would be likely to be revealed in views directly over the river where turbines are seen within the v-shaped notch created by the wooded valley sides.
- Close views from the Upper Knockando area with open and sustained visibility of the proposal from the B9102 road between the junction near Blacksboat Bridge and north-east Cardhu and more intermittent views from the southern section of the minor road between Upper Knockando and Dallas. Views will be relatively close and although turbine bases would be screened to varying degrees by woodland and landform, they would appear to dominate these smaller-scale settled upland fringes resulting in significant and adverse effects on views. Visibility across this area is represented by a single viewpoint in the EIA Report, Viewpoint 11 lying to the west of Archiestown. Paragraph 8.8.65 of the LVIA notes that felling of woodland could reveal more turbines in this view.
- Views from Ben Rinnes (which is very popular with walkers) and Ben Aigan where this proposal, together with the operational wind farms of Dorenell, Hill of Towie, Rothes I and II, Paul's Hill and Berry Burn, would result in significant adverse impacts on the appreciation of the Moray landscape.

- Views of the proposal from the A95 west of Aberlour which would significantly and adversely affect the perception of the Spey Valley landscape for both local people and the many tourists who use this route to Moray and when undertaking whisky distillery tours.
- Views from elevated dispersed properties (of which there are many) across the Spey Valley, for example from the upper part of Aberlour/Braes of Allachie where many properties, surrounding gardens, minor roads and tracks will have open and elevated views towards the wind farm (the openness of views is acknowledged in these areas in EIA Report Appendix 8.3, A8.3.148). Operational wind farms are already visible from these areas although this proposal will introduce much closer and substantially larger turbines into views with significant and adverse effects likely to arise in some areas.
- While the proposal will adversely affect views from the north near Lossiemouth and on the A96 (Viewpoints 1 and 2) by substantially extending turbines visible on the backdrop of uplands, effects are unlikely to be significant due to a combination of the distance of the proposal and the partial screening on turbines by the rolling landform around the site. However, views from the Duke of Gordon Monument in Elgin (Viewpoint 13) are more elevated and the substantial size difference between the operational Rothes I and II turbines and this proposal would be clearly appreciable as a greater extent of the north-western-most turbines are visible and seen adjacent to these smaller wind turbines.

Lighting of turbines

The proposed installation of radar activated lighting would significantly reduce the duration of lighting visible. Lighting, when visible, will be likely to contribute to significant adverse effects experienced particularly from close views. In general, the effects of lighting will be more marked when seen in a context where existing lighting levels are low, for example in the sparsely settled Upper Knockando area.

Effects on residential properties

The Residential Visual Amenity Assessment (RVAA) considers effects on residential properties lying up to 3km from the proposed wind farm. Significant visual effects are concluded to occur on 4 of these property groups although none of these effects are judged to be 'overbearing'.

Many properties within 3km of the proposal lie on the lower slopes of Carn na Caillache and Hunt Hill and tend to be orientated with principal views over the Spey Valley (and therefore away from the proposal). Woodland on hill slopes between the wind farm proposal and the properties considered in the RVAA will additionally screen views in some instances. While the visual amenity from relatively few residential properties lying within 3km of the development will be significantly

affected, there will be other properties lying up to around 7km within the Spey Valley where significant adverse effects on visual amenity may occur. These properties lie on north-west facing slopes above Aberlour and in the Upper Knockando area.

Cumulative effects with other wind farms would also occur from some properties lying within 3km of the proposal. While visibility of operational wind farms is noted in the RVAA, the assessment does not appear to consider cumulative effects with these or with other nearby proposed wind farms which could be visible. An example of this is RVAA Property 2 Knocknagore, where there are already views of Paul's Hill wind farm and where the combination of the proposed Paul's Hill II and this proposal (seen as a number of blade tips and up to 5 hubs to the rear of the two properties at this location) would be likely to result in significant cumulative effects on visual amenity from within and around the properties.

Cumulative landscape and visual impact assessment (CLVIA)

The CLVIA within the EIA Report Chapter 8 considers the effects of the proposal with consented and proposed wind farms on a baseline which includes operational wind farms.

In terms of consented wind farms, the CLVIA concludes that significant effects would occur on the *Broad Farmed Valley* (LCT 7) and the *Upland Moorland and Forest* (LCT 10) if the Hunt Hill wind farm was constructed due to the differences in pattern/size of turbines between this proposal. Significant effects on viewpoints 4, 5, 6 and 7 are also concluded likely to occur in this scenario.

The CLVIA also considers the combined effect of consented and proposed wind farms, concluding (EIA Report paragraph A8.1.15) that '*overall the increase in wind farm development assessed through the scenarios considered in this CLVIA will have significant effects on the wider landscape, with some areas becoming larger wind farm clusters and a band of development clusters forming on the hills across Moray*'. It should be noted that the proposed Clash Gour wind farm, which has been recently submitted as an application, has not been considered in the cumulative assessment.

Moray Council has additionally considered the Clash Gour application-stage wind farm in its appraisal of cumulative effects with this proposal. ZTVs and visualisations from Viewpoints 1, 4, 6, 7, 11 and 18 in the Rothes III EIA Report have been compared with similar visualisations in the Clash Gour EIA Report (principally viewpoints 5, 10, 13, 16, 18 and 20) to gauge likely effects.

Effects of this proposal with consented wind farms

The Council agrees with the findings of the CLVIA that there would be significant adverse effects on the *Broad Farmed Valley* and *Upland Moorland and Forest* LCTs if the consented Hunt Hill wind farm and this proposal were to be constructed. It is also agreed that cumulative effects would be significant on views from viewpoints 4,

5, 6 and 7 in relation to this proposal and the consented Hunt Hill wind farm being seen together.

Effects of this proposal with consented and other proposed wind farms

The consented Hunt's Hill and proposed Paul's Hill II and Clash Gour wind farms have the greatest potential to incur significant adverse cumulative effects with the Rothes III proposal. Significant adverse effects would arise on:

- The character of part of the *Broad Farmed Valley* and the *Upland Moorland and Forest* and on part of the Speyside AGLV.
- Close views from the Upper Knockando area affecting visual amenity from the B9102 and from minor roads (which are often used by local walkers and cyclists) and from dispersed properties. This proposal and the proposed Paul's Hill II and Clash Gour wind farms would be seen simultaneously and sequentially with large wind turbines partially encircling the uplands which contain these diverse settled upland fringes.
- Views from the A95 between Aberlour and Ballindalloch where this proposal would be seen sequentially and simultaneously with the proposed Clash Gour and Paul's Hill II wind farm on the uplands back-dropping the Spey Valley to the north and north-west – this proposal would make the greatest contribution to significant adverse cumulative effects in this scenario.
- Views from elevated viewpoints such as Ben Aigan and Ben Rinnes where the extent of operational, consented and application-stage wind farm developments seen in almost 270-degree views from both hills would result in a perception of Moray's uplands being largely occupied by wind farms.
- Views and the appreciation of the character of the River Spey, which weaves through a narrow floodplain and is tightly contained by steep wooded slopes, where this proposal would be seen sequentially with the proposed Clash Gour wind farm (Clash Gour EIA Report Viewpoint 10 at Carron) and possibly also the Paul's Hill II proposal, from more open sections of the valley floor.

LVIA Conclusions

The proposed development would be located in the *Upland Moorland and Forestry* LCT. The MWELCS found some scope to accommodate turbines up to 150m high in this LCT although it also advised that turbines should be set well back into the interior of these uplands to minimise landscape and visual effects on more settled, smaller scale upland fringes and adjacent valleys.

The LVIA concludes in paragraph 8.12.10 that the '*scale and topography of the receiving landscape is considered appropriate to accommodate the proposed development*'. While much of the *Upland Moorland and Forest* LCT has a simple and

expansive character which reduces sensitivity to larger wind turbines, it cannot be considered in isolation as it is not huge in extent and lies adjacent to smaller scaled settled areas which have an increased sensitivity to larger wind turbines.

The very large turbines of this proposal are sited too close to the more sensitive settled fringes of the *Upland Moorland Moorland and Forestry LCT* in the Upper Knockando area and to the Spey Valley. As a consequence, the proposal would have significant adverse effects on the appreciation of the character of these landscapes, including part of the Speyside AGLV (and the candidate Spey Valley SLA), and on views from dispersed properties, recreational features/routes and roads. While significant adverse effects are likely to be associated with most wind energy developments, this proposal would diminish the special landscape of the Spey Valley, significantly affecting both local people who live and work in the area and tourists, many of whom are attracted to the area because of its associations with whisky production.

This proposal would also make a major contribution to significant adverse cumulative effects in a scenario which includes the proposed Clash Gour and Paul's Hill II wind farms.

The proposals therefore depart from the landscape requirements identified within policies ER1 and IMP1. The proposals also fail to comply with the guidance set out in MWELCS.

Policy PP1 Sustainable Economic Growth: While the proposal will contribute towards the transition of Moray towards a low carbon economy, the proposal is considered to be contrary to the latter part of this policy, i.e. it does not safeguard the quality of the natural environment or meet the relevant policy requirements for the reasons outlined above.

Policy IMP1 Developer Requirements: The proposal is considered to be contrary to criteria a) and b) of this policy as the scale of the proposal is not in accordance with the MOWE or MWELCS. In terms of policy IMP1 the proposal would fundamentally and simply fail to provide a development that is sensitively sited or integrated into the surrounding landscape.

Impact on residential amenity including noise, shadow flicker (ER1, EP8, EP12, IMP1)

SPP paragraph 164 states that "individual properties and those settlements not identified within the development plan will be protected by the safeguards set out in the local development plan policy criteria for determining windfarms and development management considerations accounted for when determining individual applications." This for Moray is reflected in the material considerations in the form of the MOWE and the MWELCS which seek to direct wind energy development into the interior of Landscape Character Types.

It is noted that some turbines are just over 2km km from the nearest properties to the south, including the settlement of Archiestown. The size of the turbines and its elevation may affect their visual amenity in what is currently a location distant from or obscured from wind energy development. Generally however properties south of the windfarm are orientated southward, away from the windfarm location. The scale of the proposed closest turbines will likely affect the external amenity of these properties had it not been that the properties are surrounded by woodland and are most cases orientated away from the windfarm location. These impacts may be further informed by any representations submitted directly from occupants to the ECU.

Whilst submission show night views of aviation lighting, the intent to use radar activated lighting, which only comes on when aircraft are within proximity to the windfarm means they will be less often illuminated at night. When illuminated the impact will still be significant as referred to above.

In the event of approval, the Environmental Health Manager (informed by additional input from an independent noise consultant) would seek various conditions to be attached relating to noise, hours of construction, amplitude modulation effect, hours of any blasting required at borrow pits, vibration from the borrow pit operating. The parameters in terms of noise limits identified within the EIA Report do demonstrate that subject to conditions these effects could be adequately controlled or will not cause a detrimental affect due to the design of the proposed windfarm extension.

The proposed turbines are sufficiently far from neighbouring residences (more 10x rotor diameter away, that shadow flicker is not identified as an issue in the EIA Report (Chapter 14). The Council agrees with this assessment.

In the event of approval being granted it is recommended construction working hours between 0700 – 1900 hours, Monday to Friday and 0700 – 1600 hours on Saturdays only. Allowances for working outwith those hours would only be permitted with prior agreement with the council on the grounds of operational constraints and necessity.

While construction traffic using the existing site access would use the same public road as some neighbours to the site, the construction traffic would only be for a temporary period, with the residences near Gedloch Quarry most likely to be affected. While the construction phase would see the locality becoming much busier, this would only be for the construction and decommissioning periods of the development. Any extended passing places and widening on the Gedloch road to the site are likely to occur further into the forestry plantation. It should be acknowledged that the road is already a forestry haul route.

Given the distance of the proposed excavations and other construction activities from the sensitive receptors such as dwellings or other public/occupied buildings, air quality matters, assessed under policy EP12, such as dust will not be significant for the proposed development.

The amenity impact as such does not depart from these aspects of policies ER1 and IMP1 but effects such a noise could be sufficiently controlled so as not to impact upon residential properties. This does not detract from other assessments on wider visual amenity and recreation discussed elsewhere in this report. It is noted in Chapter 17 that the proposed schedule of mitigation should minimise impacts to residents, especially during the construction phase.

Impact on natural environment (E1, E2, E3, EP10, ER1 and IMP1)

In relation to policy E1 Natura 2000 Sites and National Nature Conservation Sites and E2 Local Nature Conservation Sites and Biodiversity there are no international, national or local environmental designations are present. The site sits close on its western Boundary to the 'Gull Nest' biological SSSI immediately north of the site which is a blanket bog.

As noted in the proposals section above in the upland windfarm area of the application site, there are no national, regional or local environmental designations. The merit of the location of open countryside and the habitat it provides has however been considered in the EIA Report. The report does consider the ecological, soil, geological and water environment implications upon the site and it is noted that SEPA, SNH and other consultees with specialists in peat land flora and fauna are being consulted independently by the ECU.

Policy E3 Protected Species seeks to ensure proposals do not have an adverse effect on protected species. The EIA Report identifies a variety of species upon or using the site and most notably as moorland these were mainly birds species including raptors observed. Chapter 6 Ecology and Chapter 7 Ornithology Assessment refer to the various species surveys that were undertaken, including the water environment. Groundwater Dependent Terrestrial Ecosystems are discussed in Chapter 10: Hydrology, Geology and Hydrogeological. It is noted that extensive survey work has been undertaken, and SEPA, SNH and the RSPB are best placed to comment if necessary on the validity of surveys undertaken. The proposed mitigation measures including a Habitat Management Plan (HMP) that would be prepared and agreed with various consultees in the event of approval. Within the Chapter 17 of the EIA Report, the applicant bring together a suite of mitigation

Evidence of certain protected species within the vicinity of the proposed windfarm extension as evidenced by the studies undertaken by the applicant would require the provision of measures to protect specific species identified such as otter and hen harrier. In the event of approval, specific management plans (such as Species Protection Plan and Habitat Management Plan proposed) would be required to ensure the mitigation of impacts of these species was followed through. Given the majority of works would occur in the vicinity of the existing windfarm, to existing tracks and upon open moorland, the impact is less complex than had it been wholly new development. Reliance upon existing tracks, and infrastructure exporting energy

off site significantly reduced the need for invasive works, and the extension of the windfarm makes best use of existing infrastructure in seeking to increase energy production.

As referred to earlier in the report, national guidance encourages the development of renewable energy for a variety of reasons. Reduction of the reliance upon fossil fuel power generation is clearly to the benefit of the wider environment, including that of the natural environment within Moray. Notwithstanding the physical impact of the new sections of track, borrow pits, cable laying and turbines foundations, the wider benefits of increased electricity generation conform to national policies and guidance on climate change.

Flood Risk and surface water drainage (EP5, EP6, EP7, EP10 and IMP1)

The site is not identified on SEPA's flood maps as being at risk from flooding, other than localised breaches of banks at the head waters of the Burn of Rothes and the Leanoch Burn (leading to Glenlatterach). The focus of consideration may be as to how the development affects drainage and water courses downstream. In terms of the requirements of policy EP5 Surface Water Drainage Sustainable Urban Drainage Systems (SUDS) no definitive designs have been submitted for each crossing. It is noted that the applicants have submitted pre-development peak flow rates for the main water courses within and relevant to the site.

Chapter 10 ' Hydrology, Geology and Hydrogeology considers the impact on surface water and the windfarm has been laid out to keep all turbines at least 50m from any watercourses although there will be six water crossings. These water crossings are illustrated in the technical appendix and are designed to ensure the crossing account for any 1:200 flood event plus climate change. No departure from Policy EP6 Waterbodies is anticipated where the above approach is followed. The Moray Flood Risk Management Team would seek a condition to consider the definitive designs and calculations for the water crossings to ensure that the proposals do not alter watercourse run-off rates. It is noted that water crossings would be designed to ensure water flow was not impeded, and that details of the location of crossing is included in Appendix 10.6 Water Crossing Assessment. It is also suggested that Culverts will be likely means of crossing the watercourses.

The chapter refers to various imbedded and proposed mitigation measures that would be identified in any detailed Construction Environmental Management Plan. This would cover matters such as pollution prevention, runoff and sediment management, site drainage and management of concrete works. While the approach is detailed in the EIA Report, the definitive detail for each turbine base would need to be shown once any micro-siting had been determined. A condition to this effect would be required if the development were to be approved. The principals and approach contained within the EIA Report and appendices, the imbedded mitigation in layout design, in addition to the condition referred to would ensure compliance

with policy EP5 Surface Water Drainage Sustainable Urban Drainage Systems (SUDS).

The mitigation measures proposed and best practice adopted would also seek to protect Groundwater Dependent Terrestrial Ecosystems (GWDTE) interests are protected. MFRM would require a condition confirming that post development run-off rates do not exceed pre-development run-off rates, or increase the risk of flooding to surrounding watercourses, or downstream (which would aid control of impacts on the water environment). The mitigation measures identified in Chapter 17 of the EIA Report specifically seek to protect GWDTE and the appointed Ecological Clerk of Works would monitor these areas during construction. It is noted that in terms of GWDTE that SEPA have been separately consulted by the ECU who will give the matter more specialised response.

It is noted that the proposed substation and welfare building would propose to use a new septic tank and soakaway. The consideration of individual septic tank and soakaways is now dealt with more thoroughly under Building Standards Regulations, and if the proposal is to commence then there would be a need for a Building Warrant for the proposed building which would include the design and specifications of the proposed foul drainage. No departure from policy EP10 Foul Drainage has therefore been identified.

Water Supplies (EP4)

Policy EP4 Private Water Supplies seeks to ensure that development provides evidence of wholesome and adequate supply to be provided. The applicant has assessed the likely impact on any private water supplies within a 3km radius of the proposed development, and this is shown in chapter 10 Hydrology, Geology, Hydrogeological Assessment. A Private Water Risk Assessment was also undertaken and this is included in the technical appendix 10.7. It is noted that several private water supplies could be affected, but mitigation relating to this possible impact is provided in the proposed mitigation measures in Chapter 17 including if temporary supply interruption occurred. Looking at the source and type of water supplies the predictions of any risk to these private supplies being low or negligible is a fair assessment.

The councils Environmental Health Manager have not objected to the proposals, subject to a precautionary condition in the event of approval that would seek appropriate remedial action in the event that a private water supply is affected or disturbed. The EIA Report proposes inclusion of this matter within the Construction Environmental Management Plan and commitment to emergency supply if significant effects on water supplies are found to occur. A condition to this effect is recommended by the Environmental Health Private Water Supplies team. The applicant has not been clear as to the source of water to be used in the proposed

two substation/welfare buildings and these indicative layout do show a supply being required.

It is further noted that SEPA would comment on this matter also as separate consultee to the ECU.

Notwithstanding clarity on water supplies to the development, the EIA Report and recommended mitigation would allow for compliance with the requirements of

Impact on cultural heritage (BE1, BE2, BE5, ER1)

Upon the site the archaeology is confined at present to the historic Mannoich Road, boundary cairns and the location of historic farmsteads/enclosure. Many of these features have been obscured by intervening forestry planting. The Council's Archaeologist has not objected but has recommended a condition (in the event of approval) that would ensure that any archaeology uncovered is properly assessed and recorded. This would be particularly where the proposed development seeks to excavate along, across or adjacent to the Lower Mannoich Road which is old road more liable to be host to finds. There are no Scheduled Monuments within the application site. The proposals are considered to accord with Policy BE1 Scheduled Monuments and National Designations and other related policies subject to the appropriate archaeological conditions.

In terms of Policy BE2 Listed Buildings the potential impact on the setting of Listed Buildings or their curtilage visible potentially visible from the proposed development as assessed under Chapter 9 Cultural Heritage of the EIA Report. The Council has considered Chapter 9 and its analysis of impacts on listed properties in or close to Archiestown and Rothes, where their setting would not be affected by the presence of a windfarm several km away. Views of the windfarm would be obscured for the most part, therefore where there will be minimal visual impact upon the listed building. The proposals are therefore considered to comply with policy BE2. The ECU will also receive separate advice on heritage matters directly from Historic Environment Scotland (HES). There are no battlefields within the immediate or wider locality of the proposed windfarm that would be affected, and therefore the proposal complies with policy BE5 which addresses the protection of such heritage features.

Access and traffic impacts, (T2, T5, ER1 and IMP1)

Policy T2 Provision of Road Access considers both the implications of the development during and after construction and would also be relevant to any subsequent decommissioning. T5 Parking Standard would seek to ensure that any new development has adequate off-road parking and turning space if necessary.

Both policies ER1 Renewable Energy Proposals and IMP1 require development to mitigate any traffic impact.

The abnormal load assessment submitted in support of the application is inconsistent, assessing some identified pinch points with a 55 metre blade length and some with a 63.45 metre blade length. No part of the route has been assessed with the proposed 75 metre blade.

Pinch points 17 (junction of the A941/South Street) and 18 (A941/Moss Street roundabout) have been assessed using only a 55m blade length and the junction has been assessed as a roundabout despite it being acknowledged in the report/diagrams that the junction has already been replaced with a signalised junction.

The assessment submitted is not based on the current road network layout or largest size of turbine blade proposed and identifies potential issues for smaller sized turbine blades. No assessment has been undertaken for any other components and no specifications or dimensions of components are provided.

Assessment and swept paths are required using components which match or exceed the likely dimensions proposed to assess the implications and indicate potential constraints and to consider feasibility and possible mitigation. The assessments need to include the most onerous component specifications e.g. width, length height, weight, vertical clearance etc.

The application is considered at present to departure from policies T2 Access and traffic related aspects of policies ER1 Renewable Energy Proposals and IMP1 Developer Requirements. Chapter 12 Traffic and Transport Assessment of the EIA Report does not provide sufficient information for Moray Council as Roads Authority to conclude the development would be capable of delivery on the public road network, or whether road network assets to be temporarily moved or over-run would not be unacceptably affected.

Of note if the windfarm were approved a number of conditions would be required from the Transportation Manager regarding road improvements, abnormal loads movements and routes, a Construction Traffic Management Plan, a Wear and Tear Agreement and provision of passing places and road widening. If approved a Road Bond/Security prior to the commencement of any part of the development, evidence shall be provided to confirm that a Bond or other financial security has been agreed by both parties.

Paths and access T7, ER1 and IMP1)

Both ER1 and IMP1 require new development to public access through new developments to be enhanced or protected. Within policy ER1 particularly wind energy proposals have the potential to enhance and improved public access to upland areas.

In relation to policy T7: Safeguarding & Promotion of Walking, Cycling, & Equestrian Networks it considers the impacts of movement through and past the site. It is

acknowledged that the proposed access track network, and that of the adjoining Rothes I and II windfarm has/would improve access into the upland area around Cairn Uish.

Chapter 16 Access of the EIA Report has provided information relevant to impact on paths throughout the site. There is a core path to the immediate north of the turbines, known as core path SP01 (Burn of Rothes/Mannoch Road Core Path). Within a few hundred meters of proposed turbine 8 the path direction changes to a northerly direction following the main access track for the proposed development. The path continues north to the distillery at Thomshill. SP01 will be impacted by the upgrading of the track and the movement of vehicles along a section of the main access track, particularly during the construction period. There are no further core paths within or that directly dissect the proposed development area however an aspirational core path as referred to in the Moray Core Path Plan 2011 follows the path of the Right of Way.

The Lower Mannoch Road Public Right of Way dissects the proposed development area and is a historic road route that will be affected by the development between turbine 17 and beyond turbine 8 where it converges with core path SP01. A proposed wind farm track will cross the Right of Way between turbine 17 and turbine 11. An access track will also follow the route from just north of turbine 11 to where Right of Way converges with core path.

The applicants have suggested a range of access improvements that could be incorporated into an Access Plan that could be developed in conjunction with the Construction Method Statement. Moray would wish to see a formal Public Access Management Plan (PAMP) incorporating the measures identified in paragraph 16.5.2 of the EIA report to provide parking, signage, new and resurfaced paths and to provide a new circular path linking the southern core paths which will connect core path (SP21 with SP20 as defined in the Core Paths Plan). This would also see and improved access throughout this area, with more options for access from the north east and north west of the windfarm to the Spey Valley. The Construction Method Statement would need to demonstrate the protection and enhance movement through the site during the construction phase of the core path and Right of Way.

Subject to final approval of any PAMP and Construction Method Statement, the proposal would therefore comply with policy T7.

Impact on agricultural land/soil resources/minerals (ER1, ER4, ER5 and ER6)

Policies ER1 Renewable Energy Proposals, ER4 Minerals, ER5 Agriculture and ER6 soil resources presume against the loss of agricultural land, or impacting unduly upon area of peat and other carbon rich soils. ER4 considers borrow pits and is generally favourable towards them where they meet certain criteria discussed below.

Policy ER4 acknowledges that there are benefits to borrow pits where the winning of materials on site can significantly reduce the need to import materials from beyond the site. The operational, community and environmental benefits of allowing borrow pits to be located on site must be demonstrated. The formation of many new tracks, proposed formation of the turbine and crane pads, and upgrading of existing tracks have led to permission being sought for up to 6 borrow pits on site. It is noted that these borrow pits would be positioned across the site and are all located in well positioned inconspicuous locations. A technical assessment of borrow pits is contained in technical appendix 10.4 Borrow Pit Report of the EIA Report inclusive of reference to their restoration following completion. A condition requiring their restoration would be required in the event of approval.

The land subject of the proposal is host to heathland and forestry and is of no agricultural merit, so no departure from policy ER5 will arise where no prime agricultural land will be lost.

This development would see the introduction of turbines foundations, crane pads etc. into areas up upland peat, although the applicant has demonstrated in their EIA Report how the site selection sought to avoid areas of deeper peat. Merit has been attached to the intended restoration of an area of 80-100 hectares of peatland that is currently unproductive forestry.

It is intended to submit Construction Environmental Management Plan (CEMP), and modifications are required to Peat Landslide Hazard and Risk Assessment submitted by the applicant, which propose monitoring of peat stability and compliance with best practice and mitigation proposed being adhered too. Therefore in relation to soil resources the proposal would not conflict with the requirements of policy ER6 Soil Resources and it is anticipated that the ECU would attach any conditions deemed necessary to ensure compliance with the assessment if permission were granted. It is noted that SEPA will also contribute to these matters in their separate consultation response.

Impact upon Woodland (ER2, E4, MOWE, Trees and Development SG, Moray Woodland and Forestry Strategy SG and Scottish Government Control of Woodland Removal Policy)

Policy ER2 Woodlands (in line with the Scottish Government policy) permits removal of woodland where it can be demonstrated that its loss is clearly outweighed by social or economic benefits at national/regional/local level, and if compensatory planting has been agreed. Policy E4 Trees and Development protects trees/woodland and where this is removed in association with development, the provision of compensatory planting (also supported by the MOWE). The Council's Supplementary Guidance 'Trees and Development' (2015) confirms that compensatory planting should be provided on a like for like basis and will be required for development proposals resulting in the loss of woodland exceeding 0.1ha.

Recently adopted supplementary guidance 'Moray Woodland and Forestry Strategy (2017)' contains further advice in this regard and seeks to protect and enhance the woodlands in Moray.

Chapter 11 Forestry of the EIA Report and related appendices identify that there would be substantive tree felling, re-stocking and compensatory planting carried out. The proposed development would require 252.8ha of conifer woodland to be felled in order to facilitate the proposed development and associated infrastructure. Some of this felling will involve felling of approximately 12ha which would be at risk of wind blow and will be replanted to allow to adaption of the replanted trees. 80ha – 100ha of poor quality woodland which currently lies within areas of deep peat will be felled with a view to future peat restoration. This would form part of the current development and would remain a likely action of the involved landowners such as Rothes Estate and Forestry and Land Scotland (formerly Forest Enterprise) in addition to the applicant.

The applicants whilst not providing a specific compensatory planting plan, have identified an area within the site to host the 65.75ha of compensatory tree planting required for those areas of productive forestry are being removed for turbines and infrastructure corridors. Specific details of the windblow risk re-planting or peat restoration area have not been submitted, although the area of non-productive forestry on deep peat has been identified.

The Moray Council previously objected to a wind energy proposal on grounds of lack of detail to the Hill of Towie II windfarm where the compensatory planting details were omitted from the EIA submission and departed from the Forestry Commission guidance associated with the Scottish Government's Control of Woodland Removal Policy and its associated guidance stating that complex compensatory planting proposals should be dealt with at the application stage and not addressed afterward by condition. Following later submissions to the Public Inquiry the Reporter decided not to uphold this objection by the Council, and ultimately approved compensatory planting information submitted to the Inquiry. It is noted for Rothes III that the applicant has stated the compensatory planting would be within the designated compensatory planting area, or within the wider site, so would at least remain within the locality of the windfarm.

Given that the Reporter for Hill of Towie II Inquiry ultimately allowed the matter of compensatory planting to be addressed at a later stage, during the Inquiry, it is not recommended that for Rothes III this matter is again raised as grounds for objection. Full compliance with policies E4 Trees and Development (and associated Supplementary Guidance) and ER2 Development in Woodlands where all definitive details of compensatory planting, areas deforested for peat restoration and windblow replanting is not however possible.

It is noted that Scottish Forestry (formerly the Forestry Commission) will be separately consulted on the Section 36 and will inform the ECU on this matter also. If the windfarm were to be approved, conditions about compensatory planting, and all felling, restoration and replanting could be discussed.

Social and economic issues (ED7, IMP1)

Policy ED7 Rural Business Proposals is supportive of rural business developments where there is a locational justification, sufficient infrastructure capacity, no adverse impact on natural and built heritage, and appropriate controls over siting, design, landscape and visual impact and emissions. In terms of a locational justification as the proposed windfarm would share some of its existing infrastructure with Rothes I and Rothes II in terms of the site access, and in a location where wind energy development is already present this matter requires little further consideration. The site does also lie partially in an area with acknowledged potential for windfarm development.

The proposal does meet other criteria within this policy where the development would generate construction and business activity in the area as described in Chapter 15 Socio-economic Context. The merit of which would be most notable during the construction period where more personnel would be present on site and the applicant states that the development would create employment and opportunities for the duration of the operation of the windfarm. The applicant makes reference to the benefits the proposed shared ownership scheme community fund payments. These matters will be discussed below, but weight must be attached to the economic benefit of a development of this scale. The applicants submitted technical report on socio-economic states the case for various benefits from the proposal and cites various sources suggesting that wind energy does not detrimental. Some of the sourced referred to such as the Survation poll on behalf of Scottish Renewables: Renewable Energy Poll on page 15-8 of the EIA Report displays general support for a renewables but does not evidence any proof as to how that might impact tourism. It is clear however that not all tourists would view such development negatively, but where an accumulation of wind energy development arises, this does impact upon the sense of natural landscape that visitors do cite as one of the reasons for coming to Moray.

Policy ED7 d) does require consideration to be given to siting, design, landscape and visual impact of proposed rural development. The applicant makes the case the development would improve tourism in terms of enhanced access to the countryside, and the implementation (via community benefit) of enhanced facilities for recreation and tourist purposes. These points are valid, although community benefit itself is not a material consideration, and there will members of the public who enjoy visiting windfarms and utilising the improved access they create.

Consideration must also be given however to what impact upon tourism will occur from an accumulation of wind energy development upon the landscape. The section above on Landscape and Visual Impact Assessment details the implications upon landscape so do not require to be re-iterated. Fundamentally, where upland in central and north Moray would increasingly become a windfarm landscape this would detract from the experience and enjoyment of the countryside that would be the

appeal to many visitors and to those using the countryside for recreation. Successive views from locations such as that from the A95 south of Aberlour, clearly illustrate that the dominance of wind energy developments has reached a critical stage where their prevalence would detract the natural landscape in which they are set. The Moray landscape is approaching saturation, where visitors or those pursuing outdoor recreation have little choice in locations not influenced by the presence of wind energy developments.

For the landscape and visual concerns identified above the proposal cannot be considered to comply with all the requirement of policy ED7.

Aviation Issues (ER1, EP13 and IMP1)

MLDP Policy ER1 seeks to ensure that renewable energy proposals avoid any impacts resulting from aviation and defence constraints including flight paths and aircraft radar.

The EIA Report acknowledges potential effects of the wind farm upon aircraft activity including radar systems and there has been a history in Moray of radar conflict. While aviation conflict is a specific issue within policy ER1, the Council ordinarily relies upon the expertise of the MoD and other aviation bodies to form a view on the matter. As the Ministry of Defence, National Air Traffic (NATS) and Inverness Airport have been directly consulted by the ECU this element of compliance will be left for ECU to determine upon.

Period of consent and arrangements for decommissioning and site restoration (ER1)

Development of this nature has a limited lifespan and permission is sought for a 35 year period and if permitted it would fall to the ECU to determine the period of energy production commencement. The EIA Report contains information about decommissioning and site reinstatement, which would see the preparation of a restoration scheme prior to decommissioning. The ECU would condition appropriate decommissioning requirement or provision of a bond to ensure that the development is in place only for the operational lifetime of the equipment and the site is appropriately restored at the end of that period, the proposal is considered to comply with the restoration requirements of Policy ER1.

Planning Obligations and community investment opportunities (IMP3)

No planning obligations contribution are due as such development would not have any impact on community facilities, schools etc. Separate to this it was decided by the Planning and Regulatory Services Committee on the 18th October 2012 to remove the pursuit or contribution of funds to "Community Benefit Funds" from the development management system.

The setting up of a community benefit fund should not be a matter that influences the planning decision and would be arranged separate to the planning process in the event that permission is granted. This approach is highlighted in Annex A 'Defining a Material Consideration' of the Circular 3/2013: Development Management Procedures.

The applicants are separately offering community groups the opportunity to invest a 'Shared Ownership Opportunity' scheme that would see communities investing in and sharing the profit from the development. This matter being an opportunity for individual communities may have positive outcomes, but it is difficult to attach any material weight too at this stage. It is therefore being treated as a separate matter to the consideration of the Section 36 consultation. This is consistent with the decision by Scottish Ministers in relation to Section 36 Pencloe Wind Energy Ltd decision in East Ayrshire in December 2018 where community shared ownership was not taken into account.

Conclusion

This proposal represents a significant renewable energy development for Moray. The scheme is in line with aspects of local and national policy on the expansion of renewable energy including its contribution to renewable energy targets and the furtherance of a sustainable rural economy within Moray. The applicants Planning, Design and Access Statement, EIA Report Chapter 2 Planning and Policy Context and Chapter 17 concluding statement briefly conclude that objectives of the Scottish Energy Strategy 2017 (SES) need to be considered against (and outweigh) the acknowledged significant landscape and visual impacts of the proposal. The SES does state that achieving renewables targets "can be done in a way which is compatible with Scotland's magnificent landscapes, including our areas of wild land. This means that the relevant planning and consenting processes will remain vitally important." This therefore clearly attributes weight to the need to achieve compatibility with landscape interests. The current proposal has failed to achieve the compatibility with landscape interests sought in the SES.

Similarly the Scottish Onshore Wind Energy Policy Statement 2017 (SOWE) states that "the Scottish Government acknowledges the way in which wind turbine technology and design is evolving, and fully supports the delivery of large wind turbines in landscapes judged to be capable of accommodating them without significant adverse impacts." Even by the assessment of the applicants own Landscape and Visual Impact Assessment significant effects will occur using the height of turbines proposed. The Moray Councils own review of this LVIA is that effects are greater than the applicants has suggested (see LVIA assessment above).

The SOWE also acknowledges "the technology shift towards larger turbines may present challenges when identifying landscapes with the capacity to accommodate larger scale development, as not all will be suitable." The proposed location, sat

above rural Speyside in an area visited for its rural whisky industry and natural landscape one such unsuitable location.

The Moray Council understands that these would be the largest onshore wind turbines in the UK, and at a height of up to 225m it would be wrong to understate the weight that should be attached to issues beyond the clear benefits of renewable energy production. The socio economic factors identified in Chapter 15 of the EIA Report including employment generation having been specifically born in mind in arriving at the recommendation below.

This is not simply a case of the local authorities' local wind energy guidance and capacity assessment verses national agreed targets for renewables. This recommendation has considered a broad range of issues including the national position of needing to move away from fossil fuel energy production.

The development will not adversely impact on heritage, public access or noise matters, subject to appropriate measures and conditions being put in place. It is noted that more specific technical responses relating to hydrology, ornithology, ecology and aviation will be separately addressed by other more specialist consultees to the Section 36 process.

In this case, for the reasons identified above the proposed turbines (by virtue of their size and location) would have a detrimental impact upon the landscape character of this part of Moray and upon tourist and recreational interests. Moray is clearly host to a number of wind energy developments, but the capacity of the landscape and the need to preserve the natural landscape for the benefits of other interests means that wind energy proposals must not dominate the landscape (inclusive of views from the AGLV).

On balance, the benefits of the proposal would not outweigh the detrimental landscape and visual impact in addition to the Transportation concerns. Officers consider that the potential for larger turbines identified within the 2017 Moray Wind Energy Landscape Capacity Study (MWELCS) should be re-visited by the applicant. This results in a departure from T2, ED7, E7, ER1, IMP1 and IMP2 where the development would not be sensitively sited, designed and serviced, and integrated into the surrounding landscape, preventing a negative landscape and visual impact.

Recommended decision to Committee

The proposed development is contrary to Moray Local Development Plan 2015 policies PP1 Sustainable Economic Growth, T2 Provision of Access, ED7 Rural Business Proposals, ER1 Renewable Energy Proposals, E7 Areas of Great Landscape Value and Impacts Upon the Wider Landscape, IMP1 Developer Requirements, IMP2 Development Impact Assessments and Moray Onshore Wind Energy 2017 Policy Guidance and The Moray Wind Energy Landscape Capacity Study 2017 for the following reasons:-

I. The turbines would be located close to the edges of the areas of potential for larger turbines within Landscape Character Type (LCT) 10. The proposed turbines would by virtue of their size and positions have significant adverse effects and dominate the sensitive settled landscapes lying on the upland fringes in the Upper Knockando area.

II. The proposal would be inappropriate in terms of their significant adverse impacts on landscapes and views within Moray. Views from varying distances such as those from Ben Rinnes, the A95 south of Aberlour would excessively diminish the recreational and visitor experience where the countryside would be overly populated with windfarm developments.

III. The proposal would increase the influence of wind energy development in views north from within the Spey Valley Area of Great Landscape Value (AGLV). As development must not diminish the landscape quality within this designation the policy directly guides wind energy development proposals to compliance with the 2017 Moray Wind Energy Landscape Capacity Study (MWELCS). The proposal departing from the MWELCS therefore has an unacceptable impact upon the AGLV where the landscape would be detrimentally affected.

IV. The proposed windfarm would result in complex and unacceptable cumulative views of wind energy development. These cumulative views are illustrated in the various Cumulative Zones of Theoretical Visibility figures. The proposed windfarm from varied locations within Moray would bring into view an agglomeration of windfarms, constructed or consented. This would result in significant adverse cumulative effects upon the landscape and upon visual amenity resulting in the creation of a windfarm landscape.

V. The submitted information is inadequate to satisfy policies T2 and IMP2 as it is insufficient to enable Moray Council to consider; the feasibility of the proposed development in terms of the ability to deliver turbine components, the impact on the public road and the identification of appropriate mitigation/modification or improvements necessary for the proposed development. Furthermore additional information would be required in relation to how the volumes of construction stone beyond that gleaned from on-site borrow pits has been calculated.

RELEVANT POLICIES OF THE MORAY LOCAL DEVELOPMENT PLAN 2015

Primary Policy PP1: Sustainable Economic Growth

The Local Development Plan identifies employment land designations to support requirements identified in the Moray Economic Strategy. Development proposals which support the Strategy and will contribute towards the delivery of sustainable economic growth and the transition of Moray towards a low carbon economy will be supported where the quality of the natural and built environment is safeguarded and the relevant policies and site requirements are met.

Primary Policy PP2: Climate Change

In order to contribute to reducing greenhouse gas emissions, developments of 10 or more houses and buildings in excess of 500 sq m should address the following:

- Be in sustainable locations that make efficient use of land and infrastructure
- Optimise accessibility to active travel options and public transport
- Create quality open spaces, landscaped areas and green wedges that are well connected
- Utilise sustainable construction techniques and materials and encourage energy efficiency through the orientation and design of buildings
- Where practical, install low and zero carbon generating technologies
- Prevent further development that would be at risk of flooding or coastal erosion
- Where practical, meet heat and energy requirements through decentralised and local renewable or low carbon sources of heat and power
- Minimise disturbance to carbon rich soils and, in cases where it is agreed that trees can be felled, to incorporate compensatory tree planting.

Proposals must be supported by a Sustainability Statement that sets out how the above objectives have been addressed within the development. This policy is supported by supplementary guidance on climate change.

Policy ED7: Rural Business Proposals

New business developments, or extensions to existing industrial/economic activities in the countryside, will be permitted if they meet all of the following criteria:

- a) There is a locational justification for the site concerned, particularly if there is serviced industrial land available in a nearby settlement.
- b) There is capacity in the local infrastructure to accommodate the proposals, particularly road access, or that mitigation measures can be achieved.
- c) Account is taken of environmental considerations, including the impact on natural and built heritage designations, with appropriate protection for the natural environment; the use of enhanced opportunities for natural heritage integration into adjoining land.
- d) There is careful control over siting, design, landscape and visual impact, and emissions. In view of the rural location, standard industrial estate/urban designs may not be appropriate.

Proposals involving the rehabilitation of existing properties (e.g. farm steadings) to provide business premises will be encouraged, provided road access and parking arrangements are acceptable.

Where noise emissions or any other aspect is considered to be incompatible with surrounding uses, there will be a presumption to refuse.

Outright retail activities will be considered against retail policies, and impacts on established shopping areas, but ancillary retailing (e.g. farm shop) will generally be acceptable.

Policy E1: Natura 2000 Sites and National Nature Conservation Sites

Natura 2000 designations

Development likely to have a significant effect on a Natura 2000 site which is not directly connected with or necessary to its conservation management must be subject to an appropriate assessment of the implications for its conservation objectives. Proposals will only be approved where the appropriate assessment has ascertained that there will be no adverse effect on the integrity of the site.

In exceptional circumstances, proposals that could affect the integrity of a Natura site may be approved where;

- a) there are no alternative solutions; and

- b) there are imperative reasons of over-riding public interest including those of a social or economic nature, and
- c) if compensatory measures are provided to ensure that the overall coherence of the Natura network is protected.

For Natura 2000 sites hosting a priority habitat or species (as defined in Article 1 of the Habitats Directive), prior consultation with the European Commission via Scottish Ministers is required unless either the imperative reasons of overriding public interest relate to human health, public safety or beneficial consequences of primary importance to the environment.

National designations

Development proposals which will affect a National Park, Site of Special Scientific Interest (SSSI) or National Nature Reserves will only be permitted where:

- a) the objectives of designation and the overall integrity of the area will not be compromised; or
- b) any significant adverse effects on the qualities for which the site has been designated are clearly outweighed by social, environmental or economic benefits of national importance.

Policy E2: Local Nature Conservation Sites and Biodiversity

Development likely to have a significant adverse effect on Local Nature Reserves, native woodlands identified in the Native Woodland Survey of Scotland, raised peat bog, wetlands, protected species, wildlife sites or other valuable local habitat or conflict with the objectives of Local Biodiversity Action Plans will be refused unless it can be demonstrated that;

- a) local public benefits clearly outweigh the nature conservation value of the site, and
- b) there is a specific locational requirement for the development

Where there is evidence to suggest that a habitat or species of importance exists on the site, the developer will be required at his own expense to undertake a survey of the site's natural environment.

Where development is permitted which could adversely affect any of the above habitats or species the developer must put in place acceptable mitigation measures to conserve and enhance the site's residual conservation interest.

Development proposals should protect and where appropriate, create natural and semi natural habitats for their ecological, recreational and natural habitat values. Developers will be required to demonstrate that they have considered potential improvements in habitat in the design of the development and sought to include links with green and blue networks wherever possible.

Policy E3: Protected Species

Proposals which would have an adverse effect on a European protected species will not be approved unless;

- there is no satisfactory alternative; and
- the development is required to preserve public health or public safety, or for other reasons of overriding public interest, including those of a social or economic nature, and beneficial consequences of primary importance for the environment; and the development will not be detrimental to the maintenance of the population of species concerned at a favourable conservation status of the species concerned.

Proposals which would have an adverse effect on a nationally protected species of bird will not be approved unless;

- There is no other satisfactory solution
- The development is necessary to preserve public health or public safety
- The development will not be detrimental to the conservation status of the species concerned.

Proposals which would have an adverse effect on badgers or their setts must be accompanied by a Badger Protection Plan to avoid, minimise or compensate for impacts. A licence from Scottish Natural Heritage may be required as well as planning permission. Where a protected species may be affected a species survey should be prepared to accompany the application to demonstrate how any offence under the relevant legislation will be avoided.

Policy E4: Trees and Development

The Council will serve Tree Preservation Orders (TPO's) on potentially vulnerable trees which are of significant amenity value to the community as a whole, or trees of significant biodiversity value.

Within Conservation Areas the Council will only agree to the felling of dead, dying, or dangerous trees. Trees felled within Conservation Areas or subject to TPO protection should be replaced, unless otherwise agreed with the Council.

Woodland removal will only be permitted where it would achieve significant and clearly defined additional public benefits. Where woodland is removed in association with development, developers will generally be expected to provide compensatory planting. The Council may attach conditions on planning consents ensuring that existing trees and hedges are retained or replaced.

Development proposals will be required to meet the requirements set out in the Council's Trees and Development Supplementary Guidance. This includes carrying out a tree survey to identify trees on site and those to be protected. A safeguarding distance should be retained between mature trees and proposed developments.

When imposing planting or landscaping conditions, native species should be used and the Council will seek to promote green corridors.

Proposals affecting woodland will be considered against Policy ER2.

Policy E6: National Parks and National Scenic Areas (NSA)

Development that affects National Parks or National Scenic Areas will only be permitted where:

- the objectives of designation and the overall integrity of the area will not be compromised; or
- any significant adverse effects on the qualities for which the area has been designated are clearly outweighed by social, environmental or economic benefits of national importance.

Policy E7: Areas of Great Landscape Value (AGLV) and impacts upon the wider landscape

Development proposals which would have a significant adverse effect upon an Area of Great Landscape Value will be refused unless:

- a) They incorporate the highest standards of siting and design for rural areas

- b) They will not have a significant adverse effect on the landscape character of the area, in the case of wind energy proposals the assessment of landscape impact will be made with reference to the terms of the Moray Wind Energy Landscape Capacity Study.
- c) They are in general accordance with the guidance in the Moray and Nairn Landscape Character Assessment.

New developments should be designed to reflect the landscape characteristics and special qualities identified in the Landscape Character Assessment of the area in which they are proposed.

Proposals for new hill tracks should ensure that their alignment minimises visual impact; avoids sensitive natural heritage features, avoids adverse impacts upon the local hydrology; and takes account of the likely type of recreational use of the track and wider network.

Policy BE1: Scheduled Monuments and National Designations

National Designations

Development Proposals will be refused where they will adversely affect Scheduled Monuments and nationally important archaeological sites or their settings unless the developer proves that any significant adverse effect on the qualities for which the site has been designated are clearly outweighed by social or economic benefits of national importance.

Local Designations

Development proposals which will adversely affect sites of local archaeological importance or the integrity of their settings will be refused unless it can be demonstrated that;

- a) Local public benefits clearly outweigh the archaeological value of the site, and
- b) There is no suitable alternative site for the development, and
- c) Any adverse effects can be satisfactorily mitigated at the developers expense

Where in exceptional circumstances, the primary aim of preservation of archaeological features in situ does not prove feasible, the Council shall require the excavation and researching of a site at the developers expense.

The Council will consult Historic Scotland and the Regional Archaeologist on development proposals which may affect Scheduled Monuments and archaeological sites.

Policy BE2: Listed Buildings

The Council will encourage the protection, maintenance, enhancement and active use of listed buildings.

Development proposals will be refused where they would have a detrimental effect on the character, integrity or setting of the listed building. Alterations and extensions to listed buildings or new developments within their curtilage must be of the highest quality, and respect the original structure in terms of setting, scale, materials and design.

Enabling development may be acceptable where it can be shown to be the only means of retaining a listed building(s). The resulting development should be of a high design quality protecting the listed building(s) and their setting and be the minimum necessary to enable its conservation and re-use.

No listed building should be demolished unless it can be clearly demonstrated that every effort has been made to retain it. Where demolition of a listed building is proposed it must be shown that;

- a) The building is not of special interest; or
- b) The building is incapable of repair; or
- c) The demolition of the building is essential to delivering significant benefits to economic growth or the wider community; or
- d) The repair of the building is not economically viable and that it has been marketed at a price reflecting its location and condition to potential restoring purchasers for a reasonable price.

New development should be of a comparable quality and design to retain and enhance special interest, character and setting of the listed building(s).

Buildings which are allowed to fall into a state of disrepair may be placed on the Buildings at Risk Register and remedial works to buildings in disrepair may be enforced in the public interest.

Proposals should be in accordance with guidance set out in the Scottish Historic Environment Policy (SHEP) and the Managing Change in the Historic Environment guidance note series.

EP4: Private Water Supplies

All proposals to use a private water supply must demonstrate that a wholesome and adequate supply can be provided. Applicants will be required to provide a National Grid Reference for each supply source and mark the supply (and all works associated) e.g. the source, holding tank and supply pipe, accurately on the application plan. The applicant will also be required to provide information on the source type (e.g. well, borehole, spring). This information is necessary to enable the appropriate authorities to advise on the environmental impact, adequacy, wholesomeness, capacity of supply for existing and proposed users and pollution risks.

Policy EP5: Surface Water Drainage: Sustainable Urban Drainage Systems (SUDS)

Surface water from development should be dealt with in a sustainable manner that has a neutral effect on the risk of flooding or which reduces the risk of flooding. The method of dealing with surface water should also avoid pollution and promote habitat enhancement and amenity. All sites should be drained by a sustainable drainage system (SUDS). Drainage systems should contribute to enhancing existing "blue" and "green" networks while contributing to place-making, biodiversity, recreational, flood risk and climate change objectives.

Specific arrangements should be made to avoid the issue of permanent SUD features becoming silted-up with construction phase runoff. Care must be taken to avoid the introduction of invasive non-native species during the construction of all SUD features.

Applicants must agree provisions for long term maintenance of the SUDS scheme to the satisfaction of the Council in consultation with SEPA and Scottish Water as appropriate.

A Drainage Assessment (DA) will be required for developments of 10 houses or more, industrial uses, and non-residential proposals of 500 sq metres and above.

The Council's Flood Team will prepare Supplementary Guidance on surface water drainage and flooding.

Policy EP6: Waterbodies

Proposals must be designed to avoid adverse impacts upon water environment and should seek opportunities for restoration. The Council will only approve proposals impacting on water features where the applicant provides a satisfactory report that demonstrates that any impact (including cumulative) on water quality, water quantity, physical form (morphology), river hydrology, sediment transport and erosion, nature conservation, fisheries, recreational, landscape, amenity, and economic and social impact can be adequately mitigated.

The report should consider existing and potential impacts up and downstream of the development particularly in respect of potential flooding. The Council operates a presumption against the culverting of watercourses and any unnecessary engineering works in the water environment.

A buffer strip of at least 6m between any new development and all water features is required. These should be designed to link with blue and green networks and can contribute to open space requirements. Developers may be required to make improvements to the water environment as part of the development.

Policy EP7: Control of Development in Flood Risk Areas

New development should not take place if it would be at significant risk of flooding from any source or would materially increase the possibility of flooding elsewhere. Proposals for development in areas considered to be at risk from flooding will only be permitted where a flood risk assessment to comply with the recommendations of National Guidance and to the satisfaction of both the Scottish Environment Protection Agency and the Council is provided by the applicant. This assessment must demonstrate that any risk from flooding can be satisfactorily mitigated without increasing flood risk elsewhere. Due to continuing changes in climatic patterns, the precautionary principle will apply when reviewing any application for an area at risk from inundation by floodwater.

The following limitations on development will also be applied to take account of the degree of flooding as defined in Scottish Planning Policy;

- a) In areas of little to no risk (less than 0.1%) there will be no general constraint to development.
- b) Areas of low to medium risk (0.1% to 0.5%) will be considered suitable for most development. A flood risk assessment may be required at the upper end of the probability range (i.e. close to 0.5%), and for essential civil infrastructure and most vulnerable uses. Water resistant materials and construction may be required. Areas within this risk category will generally not be suitable for civil infrastructure. Where civil infrastructure must be located in these areas or is

being substantially extended, it should be designed to be capable of remaining operational and accessible during extreme flooding events.

- c) Areas of medium to high risk (0.5% or above) may be suitable for:
- Residential, institutional, commercial and industrial development within built up areas provided flood protection measures to the appropriate standard already exist and are maintained, are under construction, or are a planned measure in a current flood management plan;
 - Essential infrastructure within built up areas, designed and constructed to remain operational during floods and not impede water flow;
 - Some recreational, sport, amenity and nature conservation uses, provided appropriate evacuation procedures are in place and
 - Job related accommodation e.g. for caretakers or operational staff.

Areas within these risk categories will generally not be suitable:

- Civil infrastructure and most vulnerable uses;
- Additional development in undeveloped and sparsely developed areas, unless a location is essential for operational reasons, e.g. for navigation and water based recreation, agriculture, transport or utilities infrastructure (which should be designed to be operational during floods and not impede water flow), and
- An alternative, lower risk location is not available and
- New caravan and camping sites.

Where development is permitted, measures to protect against or manage flood risk will be required and any loss of flood storage capacity mitigated to achieve a neutral or better outcome. Water resistant materials and construction should be used where appropriate. Elevated buildings on structures such as stilts are unlikely to be acceptable.

Policy EP8: Pollution

Planning applications for developments that may cause significant pollution in terms of noise (including RAF aircraft noise), air, water and light emissions will only be approved where a detailed assessment report on the levels, character and transmission of the potential pollution is provided by the applicant. The assessment should also demonstrate how the pollution can be appropriately mitigated. Where the

Council applies conditions to the consent to deal with pollution matters these may include subsequent independent monitoring of pollution levels.

Policy EP9: Contaminated Land

Development proposals on potentially contaminated land will be approved provided that:

- a) The applicant can demonstrate through site investigations and risk assessment, that the site is in a condition suitable for the proposed development and is not causing significant pollution of the environment; and
- b) Where necessary, effective remediation measures are agreed to ensure the site is made suitable for the new use and to ensure appropriate disposal and/or treatment of any hazardous material.

The Council recommends early contact with the Environmental Health Section, which can advise what level of information will need to be supplied.

Policy EP10: Foul Drainage

All development within or close to settlements (as defined in the Local Development Plan) of more than 2,000 population equivalent will require to connect to the public sewerage system unless connection to the public sewer is not permitted due to lack of capacity. In such circumstances, temporary provision of private sewerage systems may be allowed provided Scottish Water has confirmed investment to address this constraint has been specifically allocated within its current Quality Standards Investment Programme and the following requirements apply:

- Systems shall not have an adverse impact on the water environment;
- Systems must be designed and built to a standard which will allow adoption by Scottish Water.
- Systems must be designed such that they can be easily connected to a public sewer in the future. Typically this will mean providing a drainage line up to a likely point of connection.

All development within or close to settlements (as identified in the Local Development Plan) of less than 2000 population equivalent will require to connect to public sewerage system except where a compelling case is made otherwise. Factors to be considered in such a case will include size of the proposed development, whether the development would jeopardise delivery of public sewerage infrastructure and existing drainage problems within the area. Where a

compelling case is made, a private system may be acceptable provided it does not pose or add risk of detrimental effect, including cumulative, to the natural and built environment, surrounding uses or amenity of the general area. Consultation with Scottish Environment Protection Agency will be undertaken in these cases.

Where a private system is deemed to be acceptable (within settlements as above or small scale development in the countryside) a discharge to land (either full soakaway or raised mound soakaway) compatible with Technical Handbooks (which sets out guidance on how proposals may meet the Building (Scotland) Regulations 2004) should be explored prior to considering a discharge to surface waters.

Policy EP12: Air Quality

Development proposals, which, individually or cumulatively, may adversely affect the air quality in an area to a level which could cause harm to human health and wellbeing or the natural environment must be accompanied by appropriate provisions (deemed satisfactory to the Council and Scottish Environment Protection Agency as appropriate) which demonstrate how such impacts will be mitigated.

Some existing land uses may have a localised detrimental effect on air quality, any proposals to locate development in the vicinity of uses and therefore introduce receptors to these areas (e.g. housing adjacent to busy roads) must consider whether this would result in conflict with the existing land use. Proposals which would result in an unacceptable conflict with existing land use and air quality will not be approved.

Policy ER1: Renewable Energy Proposals

All Renewable Energy Proposals

All renewable energy proposals will be considered favourably where they meet the following criteria:

- i) They are compatible with policies to safeguard and enhance the built and natural environment
- ii) They do not result in the permanent loss or damage of agricultural land
- iii) They avoid or address any unacceptable significant adverse impacts including:
 - Landscape and visual impacts
 - Noise impacts
 - Electromagnetic disturbance
 - Impact on watercourse engineering

- Impact on peat land hydrology
- Electromagnetic disturbance
- Impact on watercourse engineering
- Traffic Impact
- Ecological Impact
- Impact on tourism and recreational interests

Onshore wind turbines

In addition to the assessment of impact outlined above the following considerations will apply:

a) The Spatial Framework

Areas of Significant Protection*: where the council will apply significant protection and proposals will only be appropriate in circumstances where any significant effects on the qualities of these areas can be substantially overcome by siting, design and other mitigation.

Areas with Potential: where the council is likely to support proposals subject to detailed consideration.

* This protection will also apply to areas with carbon rich soils, deep peat and priority peatland habitat. This constraint is not currently included on the spatial strategy mapping but will be addressed through Supplementary Guidance once the relevant data becomes available.

b) Detailed Consideration

The proposal will be determined through assessment of the details of the proposal, including its benefits, and the extent to which it avoids or mitigates any unacceptable significant adverse impact. Detailed assessment** of impact will include consideration of the extent to which:

Landscape and visual impact:

- The proposal addresses the Guidance set out in the Moray Windfarm Landscape Capacity Study
- The landscape is capable of accommodating the development without significant detrimental impact on landscape character or visual amenity
- The proposal is appropriate to the scale and character of its setting, respects the main features of the site and the wider environment and addresses the potential for mitigation.

Cumulative Impact

- Any detrimental impact from two or more wind energy developments and the potential for mitigation is addressed.

Impact on local communities

- The proposal addresses any detrimental impact on communities and local amenity including the impacts of noise, shadow flicker, visual dominance and the potential for associated mitigation.

Other

- The proposal addresses any impacts arising from location within an area subject to potential aviation and defence constraints including flight paths and aircraft radar.
- The proposal avoids or adequately resolves other impacts including on the natural and historic environment, cultural heritage, biodiversity; forest and woodlands; and tourism and recreational interests- core paths, visitor centres, tourist trails and key scenic routes.
- The proposal addresses any physical site constraints and appropriate provision for decommissioning and restoration.

** Further detail on the above assessment process will be addressed through supplementary guidance to include:

- Peat mapping once this becomes available
- Detailed mapping of constraints
- Guidance on areas with greatest potential for small/medium and large scale wind farms.

Biomass

Proposals for the development of commercial biomass facilities will be supported if the following criteria are met.

- Proposals should confirm which form of biomass will fuel the plant and if a mixture of biomass is proposed then what percentage split will be attributed to each fuel source.
- Proposals can demonstrate that they have taken account of the amount of supply fuel over the life of the project.
- When considering woody biomass proposals the scale and location of new development is appropriate to the volume of local woodfuel available.

- The location must have suitable safe access arrangements and be capable of accommodating the potential transport impacts within the surrounding roads network.
- A design statement should be submitted, which should include photomontages from viewpoints agreed by the Council.
- There should be a locational justification for proposals outwith general employment land designations. The proposed energy use, local heat users and connectivity of both heat users and electricity networks should be detailed. Proposals which involve potential or future heat users will not be supported unless these users can be brought online in conjunction with the operation of the plant.
- Details of the predicted energy input and output from the plant demonstrating the plant efficiency and utilisation of heat should be provided.
- Where necessary appropriate structural landscaping must be provided to assist the development to integrate sensitively.
- The criteria set out in relation to other renewables should also be met.

The Council will consult with the Forestry Commission Scotland (FCS) to help predict potential woodfuel supply projections in the area.

Policy ER2: Development in Woodlands

All woodlands

Development which involves the loss of woodlands will be refused where the development would result in unacceptable adverse effects on the amenity, landscape, biodiversity, economic or recreational value of the woodland or prejudice the management of the forest. Woodland removal will only be supported where it can be demonstrated that the impact on the woodland is clearly outweighed by social or economic benefits of national, regional and local importance, and if a programme of proportionate compensatory planting has been agreed with the Planning Authority.

Protected Woodlands

Woodland removal within native woodlands, ancient semi natural and woodlands within sites protected under the terms of policies E1 and E2 will not be supported.

Tree surveys and new planting

Development proposals must take account of the Council's Trees and Development supplementary guidance. The Council will require the provision of compensatory planting to mitigate the effects of woodland removal.

Where appropriate the Council will seek opportunities to create new woodland and plant native trees in new development proposals. If a development would result in the severing or impairment of connectivity between important woodland habitats, mitigation measures should be identified and implemented to support the wider green network.

Policy ER3: Safeguarding Mineral Reserves

The Council will safeguard all existing workable mineral reserves/operations from incompatible development which is likely to prejudice it unless;

- There are no alternative sites for development, and
- The extraction of mineral resources will be completed before development commences.

Policy ER4: Minerals

The Council will support, in principle, mineral extraction in the following circumstances;

- Extension to existing operations/sites,
- Reopening of a dormant quarry,
- A reserve underlying a proposed development where it would be beneficial to extract prior to development.

New minerals sites will only be permitted where it has been demonstrated that existing reserves have been exhausted or are no longer viable and for construction aggregates it has been evidenced that there is less than the minimum 10 year supply available.

Borrow pits will be supported to allow the extraction of minerals near to or on the site of associated development (e.g. wind farm and roads construction, forestry and agriculture) provided it can be demonstrated that the operational, community and environmental benefits of the proposal can be evidenced. These consents will be time limited, tied to the proposal and must be accompanied by full restoration proposals and aftercare.

Taking into account PAN 50 Controlling the Environmental Effects of Surface Minerals Workings sufficient information should be provided to enable a full assessment of the likely effects of the mineral development together with proposals for appropriate control, mitigation and monitoring.

Minerals developments should avoid or satisfactorily mitigate impacts, in determining proposals the Council will give consideration to the following issues;

- Impact on natural heritage and historic environment including landscape and visual impact,
- Disturbance and disruption from noise, blasting vibration, and potential pollution of land, air and water,
- Effect on communities,
- Cumulative impact,
- Transport impacts,
- Restoration and aftercare proposals.

Once a mineral working has ceased the land should be reinstated at the earliest opportunity. Restoration should be designed and implemented to the highest standard and after uses should result in environmental improvement and add to the cultural, recreational or environmental assets of the area. If operators cannot demonstrate that their programme of restoration (including the necessary financing, phasing and aftercare of the sites) is sufficient a financial guarantee may be sought;

Proposals should be accompanied by an Extractive Waste Management plan.

Policy ER5: Agriculture

The Council will support the agricultural sector by:

- a) Presuming against irreversible development on prime agricultural land (classes 1,2 and 3.1) unless the site is required for settlement expansion and there is no other suitable alternative.
- b) Supporting farm diversification proposals in principle and supporting business proposals which are intended to provide additional income/ employment on farms.

Proposals for agricultural buildings with a locational requirement will be subject to visual, landscape and amenity considerations and considered against the relevant environmental policies.

Policy ER6: Soil Resources

Where peat and other carbon rich soils are present disturbance to them may lead to the release of carbon dioxide contributing to the greenhouse gas emissions. Developers should assess the likely effects associated with any development work and aim to mitigate any adverse impacts arising.

For major developments, minerals and large scale (over 20MW) renewable energy proposals, development will only be permitted where it has been demonstrated that unnecessary disturbance of soils, peat and any associated vegetation is avoided. Evidence of the adoption of best practice in the movement, storage, management and reinstatement of soils must be submitted along with any relevant planning application, including if necessary measures to prevent the spread of invasive non-native species.

Major developments, minerals and large scale renewable energy proposals on undisturbed areas of deep peat (defined as 1.0m or more) will only be permitted for these uses where:

- a) the economic, social and/or environmental benefits of the proposal outweigh any potential detrimental effect on the environment (in particular with regard to the release of carbon dioxide into the atmosphere); and
- b) it has been clearly demonstrated that there is no viable alternative.

Where development on undisturbed peat is deemed acceptable, a peat depth survey must be submitted which demonstrates that the areas of deepest peat have been avoided. Where required, a peat management plan must also be submitted which demonstrates that unnecessary disturbance, degradation or erosion of peat is avoided.

Large scale commercial peat extraction will not be permitted.

Policy T2: Provision of Access

The Council will require that new development proposals are designed to provide the highest level of access for end users including residents, visitors, and deliveries appropriate to the type of development and location. Development must meet the following criteria:

- Proposals must maximise connections and routes for pedestrian and cyclists, including links to active travel and core path routes, to reduce travel demands and provide a safe and realistic choice of access.
- Provide access to public transport services and bus stop infrastructure where appropriate.
- Provide appropriate vehicle connections to the development, including appropriate number and type of junctions.
- Provide safe entry and exit from the development for all road users including ensuring appropriate visibility for vehicles at junctions and bends.
- Provide appropriate mitigation/modification to existing transport networks where required to address the impacts of new development on the safety and efficiency of the transport network. This may include but would not be limited to, the following measures, passing places, road widening, junction enhancement, bus stop infrastructure and drainage infrastructure. A number of potential road improvements have been identified in association with the development of sites the most significant of these have been shown on the Settlement Map as TSPs.
- Proposals must avoid or mitigate against any unacceptable adverse landscape or environmental impacts.

Developers should give consideration to aspirational core paths (under Policy 2 of the Core Paths Plan) and active travel audits when preparing proposals.

New development proposals should enhance permeability and connectivity, and ensure that opportunities for sustainable and active travel are protected and improved.

The practicality of use of public transport in more remote rural areas will be taken into account however applicants should consider innovative solutions for access to public transport.

When considered appropriate by the planning authority developers will be asked to submit a Transport Assessment and Travel Plan.

Significant travel generating proposals will only be supported where:

- Direct links to walking and cycling networks are available;
- Access to public transport networks would involve walking no more than 400m;

- It would not have a detrimental effect on the capacity of the strategic road and/or rail network; and
- A Transport Assessment identifies satisfactory mechanisms for meeting sustainable transport requirements and no detrimental impact to the performance of the overall network.

Access proposals that have a significant adverse impact on the surrounding landscape and environment that cannot be mitigated will be refused.

Policy T5: Parking Standards

Proposals for development must conform with the Council's current policy on parking standards.

Policy T7: Safeguarding & Promotion of Walking, Cycling, & Equestrian Networks

The Council will promote the improvement of the walking, cycling, and equestrian networks within Moray. Priority will be given to the paths network including Core Paths and the wider Moray Paths Network. There are several long distance routes that cross Moray including the Speyside Way, Dava Way, Moray Coastal Trail and Aberdeen to Inverness National Cycle Route.

Development proposals that would have an unacceptable impact on access rights, core paths, rights of way, long distance routes and other access routes that cannot be adequately mitigated will not be permitted. Where a proposal will affect any of these, proposals must:

- incorporate the route within the site layout and the routes amenity value must be maintained or enhanced; or
- provide alternative access that is no less attractive and is safe and convenient for the public to use.

Policy IMP1: Developer Requirements

New development will require to be sensitively sited, designed and serviced appropriate to the amenity of the surrounding area. It should comply with the following criteria

- a) The scale, density and character must be appropriate to the surrounding area.
- b) The development must be integrated into the surrounding landscape

- c) Road, cycling, footpath and public transport must be provided at a level appropriate to the development. Core paths; long distance footpaths; national cycle routes must not be adversely affected.
- d) Acceptable water and drainage provision must be made, including the use of sustainable urban drainage systems (SUDS) for dealing with surface water.
- e) Where of an appropriate scale, developments should demonstrate how they will incorporate renewable energy systems, and sustainable design and construction. Supplementary Guidance will be produced to expand upon some of these criteria.
- f) Make provision for additional areas of open space within developments.
- g) Details of arrangements for the long term maintenance of landscape areas and amenity open spaces must be provided along with Planning applications.
- h) Conservation and where possible enhancement of natural and built environmental resources must be achieved, including details of any impacts arising from the disturbance of carbon rich soil.
- i) Avoid areas at risk of flooding, and where necessary carry out flood management measures.
- j) Address any potential risk of pollution including ground water contamination in accordance with recognised pollution prevention and control measures.
- k) Address and sufficiently mitigate any contaminated land issues
- l) Does not sterilise significant workable reserves of minerals or prime quality agricultural land.
- m) Make acceptable arrangements for waste management.

Policy IMP2: Development Impact Assessments

The Council will require applicants to provide impact assessments in association with planning applications in the following circumstances:

- a) An Environmental Assessment (EA) will be required for developments that are likely to have significant environmental affects under the terms of the regulations.

- b) A Transport Assessment (TA) will be sought where a change of use or new development is likely to generate a significant increase in the number of trips being made. TAs should identify any potential cumulative effects which would need to be addressed. Transport Assessments should assess the effects the development will have on roads and railway infrastructure including stations and any crossings. Transport Scotland (Trunk Roads) and Network Rail (Railway) should be consulted on the scoping of Transport Assessments. Moray Council's Transportation Service can assist in providing a screening opinion on whether a TA will be sought.
- c) In order to demonstrate that an out of centre retail proposal will have no unacceptable individual or cumulative impact on the vitality and viability of the identified network of town centres, a Retail Impact Assessment will be sought where appropriate. This may also apply to neighbourhood shops, ancillary retailing and recreation/tourism retailing.
- d) Where appropriate, applicants may be asked to carry out other assessments (e.g. noise; air quality; flood risk; drainage; bat; badger; other species and habitats) in order to confirm the compatibility of the proposal.

Policy IMP3: Developer Obligations

Contributions will be sought from developers in cases where, in the Council's view, a development would have a measurable adverse or negative impact upon existing infrastructure, community facilities or amenity, and such contributions would have to be appropriate to reduce, eliminate or compensate for that impact.

Where the necessary contributions can be secured satisfactorily by means of planning conditions attached to a planning permission, this should be done, and only where this cannot be achieved, for whatever reason, the required contributions should be secured through a planning agreement.

The Council will prepare supplementary guidance to explain how the approach will be implemented in accordance with Circular 3/2012 on Planning Obligations. This will detail the necessary facilities and infrastructure and the scale of contributions likely to be required.

In terms of affordable housing, developments of 4 or more units will be expected to make a 25% contribution, as outlined in policy H8.

PROPOSED MORAY LOCAL DEVELOPMENT PLAN 2020 (LIKELY RELEVANT POLICIES)

PP2 SUSTAINABLE ECONOMIC GROWTH.

"Development proposals for employment land which support the Moray Economic Strategy to deliver sustainable economic growth will be supported where the quality of the natural and built environment is safeguarded, there is a clear locational need and all potential impacts can be satisfactorily mitigated. "

DP1 DEVELOPMENT PRINCIPLES.

This policy applies to all developments, including extensions and conversions and will be applied proportionately.

The Council will require applicants to provide impact assessments in order to determine the impact of a proposal. Applicants may be asked to determine the impacts upon the environment, transport network, town centres, noise, air quality, landscape, trees, flood risk, protected habitats and species, contaminated land, built heritage and archaeology and provide mitigation to address these impacts.

Development proposals will be supported if they conform to the relevant Local Development Plan policies, proposals and additional guidance, meet the following criteria and address their individual and cumulative impacts:

(i) Design

- a) The scale, density and character must be appropriate to the surrounding area and create a sense of place (see Policy PP1) and support the principles of a walkable neighbourhood.
- b) The development must be integrated into the surrounding landscape which will include safeguarding existing trees and undertaking replacement planting to include native trees for any existing trees that are felled, and safeguarding any notable topographical features (e.g. distinctive knolls), stone walls and existing water features by avoiding channel modifications and culverting. A tree survey and tree protection plan must be provided with planning applications for all proposals where mature trees are present on site or that may impact on trees outwith the site. The strategy for new tree provision should follow the principles of the "Right Tree in the Right Place".
- c) Make provision for new open space and connect to existing open space under the requirements of Policy EP5 and provide details of the future maintenance of these spaces. A detailed landscape plan must be submitted with planning applications and include information about green/blue infrastructure, tree species, planting, ground/soil conditions, and natural and man-made features (e.g. grass areas, wildflower verges, fencing, walls, paths, etc.).

- d) Demonstrate how the development will conserve and enhance the natural and built environment and cultural heritage resources, retain original land contours and integrate into the landscape.
- e) Proposals must not adversely impact upon neighbouring properties in terms of privacy, daylight or overbearing loss of amenity.
- f) Proposals do not result in backland development or plots that are subdivided by more than 50% of the original plot. Sub-divided plots must be a minimum of 400m², excluding access and the built-up area of the application site will not exceed one-third of the total area of the plot and the resultant plot density and layout reflects the character of the surrounding area.
- g) Pitched roofs will be preferred to flat roofs and box dormers are not acceptable.
- h) Existing stone walls on buildings and boundaries must be retained. Alterations and extensions must be compatible with the character of the existing building in terms of design, form, choice of materials and positioning and meet all other relevant criteria of this policy.
- i) Proposals must orientate and design buildings to maximise opportunities for solar gain

(ii) Transportation

- a) Proposals must provide safe entry and exit from the development, including the appropriate number and type of junctions, maximise connections and routes for pedestrians and cyclists, including links to active travel and core path routes, reduce travel demands and ensure appropriate visibility for all road users at junctions and bends. Road, cycling, footpath and public transport connections and infrastructure must be provided at a level appropriate to the development and connect people to education, employment, recreation, health, community and retail facilities.
- b) Car parking must not dominate the street scene and must be provided to the side or rear and behind the building line. Minimal (25%) parking to the front of buildings and on street may be permitted provided that the visual impact of the parked cars is mitigated by hedging or low stone boundary walls. Roadways with a single carriageway must provide sufficient off road parking to avoid access routes being blocked to larger service vehicles and prevent parking on pavements.

- c) Provide safe access to and from the road network, address any impacts on road safety and the local road and public transport network. Any impacts identified through Transport Assessments/ Statements must be identified and mitigated. This may include but would not be limited to, passing places, road widening, junction improvements, bus stop infrastructure and drainage infrastructure. A number of potential mitigation measures have been identified in association with the development of sites and the most significant are shown on the Proposals Map as TSP's.
 - d) Provide covered and secure facilities for cycle parking at all flats/apartments, retail, community, education, health and employment centres.
 - e) Garages and parking provision must be designed to comply with Moray Council parking specifications see Appendix 2.
 - f) The road layout must be designed to allow for the efficient mechanical sweeping of all roadways and channels, pavements, turning areas and junctions. The road layout must also be designed to enable safe working practices, minimising reversing of service vehicles with hammerheads minimised in preference to turning areas and to provide adequate space for the collection of waste and movement of waste collection vehicles.
 - g) The road and house layout in urban development should allow for communal refuse collection points where the design does not allow for individual storage within the curtilage and / or collections at kerbside. Communal collection points may either be for the temporary storage of containers taken by the individual householder or for the permanent storage of larger containers. The requirements for a communal storage area are stated within the Council's Kerbside Collection Policy, which will be a material consideration.
 - h) Road signs should be minimised designed and placed at the back of footpaths to reduce street clutter, avoid obstructing pedestrian movements and safeguarding sightlines.
 - i) Within communal parking areas there will be a requirement for electric car charging points. Parking spaces for car sharing must be provided where a need is identified by the Transportation Manager.
- iii) Water environment, pollution, contamination.

- a) Acceptable water and drainage provision must be made, including the use of sustainable urban drainage systems (SUDS) for dealing with surface water including temporary/ construction phase SUDS (see Policy EP12).
- b) New development should not be located in areas at flood risk or increase vulnerability to flooding (see Policy EP12). Exceptions to this would only be considered in specific circumstances, e.g. extension to an existing building or change of use to an equal or less vulnerable use. Where this exception is applied the proposed development must include resilience measures such as raised floor levels and electrical sockets.
- c) Proposals must avoid major hazard sites and address any potential risk of pollution including ground water contamination in accordance with recognised pollution prevention and control measures.
- d) Proposals must protect and wherever practicable enhance water features through for example naturalisation of watercourses by introducing a more natural planform and removing redundant or unnecessary structures.
- e) Proposals must address and sufficiently mitigate any contaminated land issues.
- f) Make acceptable arrangements for waste collection and management and encourage recycling.
- g) Avoid sterilising significant workable reserves of minerals, prime agricultural land or productive forestry.
- h) Proposals must avoid areas at risk of coastal erosion and coastal change.

DP5 BUSINESS & INDUSTRY

- a) Development of employment land is supported to deliver the aims of the Moray Economic Strategy. A hierarchical approach will be taken when assessing proposals for business and industrial uses. New and existing employment designations are set out in Settlement Statements and their description identifies where these fall within the policy hierarchy.

Proposals must comply with Policy DP1, site development requirements within town and village statements, and all other relevant policies within the Plan. Office development that will attract significant numbers of people must comply with Policy DP7 Retail/Town Centres.

b) Business Parks.

Business parks will be kept predominantly for 'high-end' businesses such as those related to life sciences and high technology uses. These are defined as Class 4 (business) of the Town and Country Planning (Use Classes) (Scotland) Order 1997. This applies to new proposals as well as redevelopment within established Business Parks.

Proposals for the development of new business parks must adhere to the key design principles set out in town statements or Development Frameworks adopted by the Council.

c) Industrial Estates.

Industrial Estates will be primarily reserved for uses defined by Classes 4 (business), 5 (general) and 6 (storage and distribution) of the Town and Country Planning (Use Classes) (Scotland) Order 1997. This applies to new proposals as well as redevelopment within established Industrial Estates. Industrial Estates could be suitable sites for waste management facilities.

d) Existing Business Areas.

Long established business uses will be protected from non-conforming uses (e.g. housing). The introduction or expansion of non-business uses (e.g. retail) will not be permitted, except where the total redevelopment of the site is proposed.

e) Other Uses.

Class 2 (business and financial), 3 (food and drink), 11 (assembly and leisure) and activities which do not fall within a specific use class (*sui generis*), including waste management facilities will be considered in relation to their suitability to the business or industrial area concerned, their compatibility with neighbouring uses and the supply of serviced employment land. Retail uses will not be permitted unless they are considered ancillary to the principal use (e.g. manufacture, wholesale). For this purpose, 'ancillary' is taken as being linked directly to the existing use of the unit and comprising no more than 10% of the total floor area up to a total of 1,000 sq metres (gross) or where a sequential approach in accordance with town centre first principles has identified no other suitable sites and the proposal is in accordance with all other relevant policies and site requirements are met.

f) Areas of Mixed Use.

Proposals for a mix of uses where site specific opportunities are identified within Industrial Estate designations in the Settlement Statement, will be considered favourably where evidence is provided to the authority's satisfaction that the proposed mix will enable the servicing of employment land and will not compromise the supply of effective employment land. A Development Framework that shows the layout of the whole site, range of uses, landscaping, open space and site specific design requirements must be provided. The minimum levels of industrial use specified within designations must be achieved on the rest of the site.

g) Rural Businesses and Farm Diversification.

Proposals for new business development and extensions to existing businesses in rural locations including tourism and distillery operations will be supported where there is a locational need for the site and the proposal is in accordance with all other relevant policies.

A high standard of design appropriate to the rural environment will be required and proposals involving the rehabilitation of existing properties (e.g. farm steadings) to provide business premises will be encouraged.

Outright retail activities will be considered against policy DP7, and impacts on established shopping areas, but ancillary retailing (e.g. farm shop) will generally be acceptable.

Farm diversification proposals and business proposals that will support the economic viability of the farm business are supported where they meet the requirements of all other relevant Local Development Plan policies.

h) Inward Investment Sites.

The proposals map identifies a proposed inward investment site at Dallachy which is safeguarded for a single user business proposal seeking a large (up to 40ha), rural site. Additional inward investment sites may be identified during the lifetime of the Plan.

Proposals must comply with Policy DP1 and other relevant policies.

DP8 TOURISM FACILITIES & ACCOMMODATION.

Proposals which contribute to Moray's tourism industry will be supported where they comply with relevant policies. All proposals must demonstrate a locational need for a specific site.

Development built as tourism/holiday accommodation shall be retained for this purpose and will not become permanent residences. Conditions will be applied to planning consents to control this aspect.

To integrate caravan, chalet and glamping developments into their rural setting, stances/pitches will be required to have an informal layout and be satisfactorily landscaped to ensure development is screened and discrete. Provision within sites for touring caravans/campers and tents must be included.

Proposals for hutting will be supported where it is low impact, does not adversely affect trees or woodland interests, or the habitats and species that rely upon them, the design and ancillary development (e.g. car parking and trails) reflects the wooded environment and the proposal complies with other relevant policies. Proposals must comply with 'New Hutting Developments - Good Practice Guidance on the Planning, Development and Management of Huts and Hut Sites' published by Reforesting Scotland.

Proposals for tourism facilities and accommodation within woodlands must support the proposals and strategy set out in the Moray Woodlands and Forestry Strategy.

DP9 RENEWABLE ENERGY.

a) All Renewable Energy Proposals.

All renewable energy proposals will be considered favourably where they meet the following criteria:

- i) They are compliant with policies to safeguard and enhance the built and natural environment.
- ii) They do not result in the permanent loss or damage of agricultural land.
- iii) They avoid or address any unacceptable significant adverse impacts including:

- Landscape and visual impacts.
- Noise impacts.
- Air quality impacts.
- Electromagnetic disturbance.
- Impact on water environment.
- Impact on carbon rich soils and peat land hydrology.
- Impact on woodland and forestry interests.
- Traffic impact-mitigation during both construction and operation.
- Ecological Impact.
- Impact on tourism and recreational interests.

b) Onshore wind turbines.

In addition to the assessment of the impact outlined above the following considerations will apply:

i) The Spatial Framework.

Areas of Significant Protection (Map 2): where the Council will apply significant protection and proposals will only be appropriate in circumstances where any significant effects on the qualities of these areas can be substantially overcome by siting, design and other mitigation.

Areas with Potential (Map 1): where wind farms are likely to be acceptable subject to detailed consideration against policy criteria, the Moray Onshore Wind Energy Supplementary Guidance and the Moray Wind Energy Landscape Capacity Study.

ii) Detailed Consideration.

The proposal will be determined through assessment of the details of the proposal, including its contribution to renewable energy generation targets and effect on greenhouse gas emissions, net economic impact, including socio-economic benefits such as employment, associated business and supply chain opportunities and the extent to which it avoids or mitigates any unacceptable significant adverse impact. Detailed assessment of impact will include consideration of the extent to which:

iii) Landscape and visual impact:

- The proposal addresses the Guidance set out in the Moray Windfarm Landscape Capacity Study and Moray Onshore Wind Energy Supplementary Guidance.
- The proposal is capable of accommodating the development without significant detrimental impact on landscape character or visual amenity.
- The proposal is appropriate to the scale and character of its setting, respects the main features of the site and the wider environment and addresses the potential for mitigation.

iv) Cumulative impact.

- Any detrimental impact from two or more wind energy developments and the potential for mitigation is addressed.

v) Impact on local communities.

- The proposal addresses any detrimental impact on communities and local amenity including the impacts of noise, shadow flicker, visual dominance and the potential for associated mitigation.

vi) Other.

- The proposal addresses any impacts arising from the location within an area subject to potential aviation and defence constraints including flight paths and aircraft radar.
- The proposal avoids or adequately resolves other impacts including on the natural and historic environment, cultural heritage, biodiversity, forest and woodlands and tourism and recreational interests- core paths, visitor centres, tourist trails and key scenic routes.
- The proposal addresses any physical site constraints and appropriate provision for decommissioning and restoration.

c) Biomass.

Proposals for the development of commercial biomass will be supported if the following criteria are met.

- Applicants must confirm which form of biomass will fuel the plant and if a mixture of biomass is proposed then what percentage split will be attributed to each fuel source.
- Proposals must demonstrate that they have taken account of the amount of supply fuel over the life of the project.
- When considering wood biomass proposals, the scale and location of new development is appropriate to the volume of local woodfuel available. Sources of fuel must be identified and must be sustainable.
- The location must have suitable safe access arrangements and be capable of accommodating the potential transport impacts within the surrounding roads network.
- A design statement must be submitted, which should include photomontages from viewpoints agreed by the Council.
- There must be a locational justification for proposals outwith general employment land designations. The proposed energy use, local heat users and connectivity

of both heat users and electricity networks must be detailed. Proposals which involve potential or future heat users will not be supported unless these users can be brought online in conjunction with the operation of the plant.

- Details of the predicted energy input and output from the plant demonstrating the plant efficiency and utilisation of heat must be provided.
- Where necessary appropriate structural landscaping must be provided to assist the development to integrate sensitively.

The criteria set out in relation to other renewables must also be met.

The Council will consult with the Forestry Commission Scotland (FCS) to help predict potential woodfuel supply projections in the area.

DP10 MINERALS.

a) Safeguarding Mineral Reserves.

The Council will safeguard all existing workable mineral reserves/ operations from incompatible development which is likely to prejudice it unless;

- There are no alternative sites for development; and
- The extraction of mineral resources will be completed before development commences.

b) Mineral Operations.

Proposals for mineral extraction will be acceptable in the following circumstances, subject to compliance with other relevant LDP policies;

- Extension to existing operation/ sites.
- Re-opening of a dormant quarry.
- A reserve underlying a proposed development where it would be beneficial to extract prior to development.

Proposals for new and extensions to existing mineral sites, which contribute to the maintenance of at least a 10 years supply of permitted reserves of construction aggregates in Moray will be supported, subject to meeting the terms of Policy DP1 and other relevant policies.

Proposals for borrow pits will be supported, subject to compliance with other relevant policies, to allow the extraction of minerals near to or on the site of associated development (e.g. wind farm and roads construction, forestry and agriculture) provided it can be demonstrated that the

operational, community and environmental benefits of the proposal can be evidenced. These consents will be time limited, tied to the proposal and must be accompanied by full restoration proposals and aftercare.

All mineral development proposals must avoid or satisfactorily mitigate impacts. In determining proposals, the Council will give consideration to the requirements of Policy DP1. Additional mitigation may be required for renewables at existing quarries.

Proposals must be accompanied by an extractive Waste Management Plan.

c) Restoration and aftercare.

Operators must provide details of their proposed programme of restoration (including the necessary financing, phasing and aftercare of the sites). In some circumstances, the Council may require a financial guarantee/ bond. Restoration programmes must reinstate the site at the earliest opportunity when excavation has ceased.

Restoration must be designed and implemented to the highest standard. After uses must result in environmental improvement and add to the cultural, recreational or environmental assets of the area.

EP1 NATURAL HERITAGE DESIGNATIONS.

a) Natura 2000 designations.

Development likely to have a significant effect on a Natura 2000 site and which is not directly connected with or necessary to the conservation management of that site must be subject to an appropriate assessment of the implications for its conservation objectives. Proposals will only be approved where the appropriate assessment has ascertained that there will be no adverse effect on the integrity of the site.

In exceptional circumstances, proposals that could affect the integrity of a Natura 2000 site may be approved where:

- i) There are no alternative solutions; and
- ii) There are imperative reasons of over-riding public interest including those of a social or economic nature; and
- iii) Compensatory measures are provided to ensure that the overall coherence of the Natura network is protected.

For Natura 2000 sites hosting a priority habitat or species (as defined in Article 1 of the Habitats Directive), prior consultation with the European Commission via Scottish Ministers is required unless the imperative reasons of overriding public interest relate to human health, public safety or beneficial consequences of primary importance to the environment.

b) National designations.

Development proposals which will affect a National Park, National Scenic Area (NSA), Site of Special Scientific Interest (SSSI) or National Nature Reserve will only be permitted where:

- i) The objectives of designation and the overall integrity of the area will not be compromised; or
- ii) Any significant adverse effects on the qualities for which the site has been designated are clearly outweighed by social, environmental or economic benefits of national importance.

c) Local Designations

Development proposals likely to have a significant adverse effect on Local Nature Reserves, wildlife sites or other valuable local habitats will be refused unless it can be demonstrated that;

- i) Public benefits clearly outweigh the nature conservation value of the site, and
- ii) There is a specific locational requirement for the development, and
- iii) Any potential impacts can be satisfactorily mitigated to conserve and enhance the site's residual conservation interest.

d) European Protected Species

European Protected Species are identified in the Habitats Regulations 1994 (as amended in Scotland). Where a European Protected Species may be present or affected by development or activity arising from development, a species survey and where necessary a Species Protection Plan should be prepared to accompany the planning application, to demonstrate how the Regulations will be complied with. The survey should be carried out by a suitably experienced and licensed ecological surveyor.

Proposals that would have an adverse effect on European Protected Species will not be approved unless;

- i) The need for development is one that is possible for SNH to grant a license for under the Regulations (e.g. to preserve public health or public safety).
 - ii) There is no satisfactory alternative to the development.
 - iii) The development will not be detrimental to the maintenance of the favourable conservation status of the species.
- e) Other protected species.

Wild birds and a variety of other animals are protected under domestic legislation, such as the Wildlife and Countryside Act 1981 (as amended in Scotland by the Nature Conservation (Scotland) Act 2004 and the Wildlife and Natural Environment (Scotland) Act 2011), Protection of Badgers Act 1992 and Marine (Scotland) Act 2010. Where a protected species may be present or affected by development or activity arising from development, a species survey and where necessary a Species Protection Plan should be prepared to accompany the planning application to demonstrate how legislation will be complied with. The survey should be carried out by a suitably experienced ecological surveyor, who may also need to be licensed depending on the species being surveyed for.

Proposals which would have an adverse effect on badgers or their setts must be accompanied by a Badger Protection Plan demonstrating how impacts will be avoided, mitigated, minimised or compensated for.

EP2 BIODIVERSITY

All development proposals must retain, protect and enhance features of biological interest and provide for their appropriate management. Developments must safeguard and connect into wildlife corridors, green/blue networks and prevent fragmentation of existing habitats.

Development should integrate measures to enhance biodiversity as part of multi-functional spaces/ routes.

Proposals for 4 or more housing units or 1000 m² or more of commercial floorspace must create new or, where appropriate, enhance natural habitats of ecological and amenity value.

Developers must demonstrate through a Placemaking Statement which incorporates a Biodiversity Plan, that they have included habitat creation in the design of the development. This can be achieved by providing links into existing green and blue

networks, wildlife friendly features such as wildflower verges and meadows, bird and bat boxes, amphibian friendly kerbing, wildlife crossing points such as hedgehog highways and planting to encourage pollination, wildlife friendly climbing plants, use of hedges rather than fences, incorporating biodiversity measures into SUDS and retaining some standing or lying dead wood, allotments, orchards and woodlands.

Where development results in the loss of natural habitats of ecological and amenity value, compensatory habitat creation will be required on an alternative site in Moray.

EP3 SPECIAL LANDSCAPE AREAS AND LANDSCAPE CHARACTER.

i) Special Landscape Areas (SLA's).

Development proposals within SLA's will only be permitted where they do not prejudice the special qualities of the designated area set out in the Moray Local Landscape Designation Review, adopt the highest standards of design in accordance with Policy DP1 and other relevant policies, avoid adverse effects on the landscape and visual qualities the area is important for, and are for one of the following uses;

a) In rural areas (outwith defined settlement and rural grouping boundaries);

- i) Where the proposal involves an appropriate extension or change of use to existing buildings, or
- ii) For uses directly related to distilling, agriculture, forestry and fishing which have a clear locational need and demonstrate that there is no alternative location, or
- iii) For nationally significant infrastructure developments identified in the National Planning Framework.

b) In urban areas (within defined settlement, rural grouping boundaries and LONG designations);

- i) Where proposals conform with the requirements of the settlement statements, Policies PP1, DP1 and DP3 as appropriate and all other policy requirements, and
- ii) Proposals reflect the traditional settlement character in terms of siting and design.

c) The Coastal (Culbin to Burghead, Burghead to Lossiemouth, Lossiemouth to Portgordon, Portgordon to Cullen Coast), Cluny Hill, Spynie, Quarrywood and Pluscarden SLA's are classed as " sensitive" in terms of Policy DP4 and no new housing in the open countryside will be permitted within these SLA's.

Proposals for new housing within other SLA's not specified in the preceding para will be considered against the criteria set out above and the criteria of Policy DP4.

Where a proposal is covered by both a SLA and CAT or ENV policy/ designation, the SLA policy will take precedence.

ii) Landscape Character.

New developments must be designed to reflect the landscape characteristics identified in the Landscape Character Assessment of the area in which they are proposed.

Proposals for new roads and hill tracks associated with rural development must ensure that their alignment and use minimises visual impact, avoids sensitive natural heritage and historic environment features, including areas protected for nature conservation, carbon rich soils and protected species, avoids adverse impacts upon the local hydrology and takes account of recreational use of the track and links to the wider network.

EP7 FORESTRY, WOODLANDS AND TREES.

a) Forestry.

Proposals which support the economic, social and environmental objectives and projects identified in the Moray Forestry and Woodlands Strategy will be supported where they meet the requirements of all other relevant Local Development Plan policies. The Council will consult Forestry Commission Scotland on proposals which are considered to adversely affect commercial forests.

b) Woodlands.

In support of the Scottish Government's Control of Woodland Removal Policy, development which involves permanent woodland removal will only be permitted where it would achieve significant and clearly defined additional public benefits and where removal will not result in unacceptable adverse effects on the amenity, landscape, biodiversity, economic or recreational value of the woodland or prejudice the management of the woodland.

Where woodland is removed in association with development, developers must provide compensatory planting to be agreed with the planning authority either on site, or an alternative site in Moray which is in the applicant's control or

through a commuted payment to the planning authority to deliver compensatory planting and recreational greenspace within Moray.

Woodlands identified in the Ancient Woodland Inventory are important not just for the trees, but for the soil structure, flora and fauna that rely on such woodlands. Ancient woodland ecosystems have been created over hundreds of years and are irreplaceable. Woodland removal within native woodlands identified as a feature of sites protected under Policy EP1 or woodland identified in the Ancient Woodland Inventory will not be supported.

c) Trees and Tree Preservation Orders.

Development proposals must to retain existing healthy, mature trees and incorporate them within the proposal. Where mature trees exist on or bordering a development site, a tree survey and tree protection and mitigation plan must be provided with planning applications if the trees (or their roots) have the potential to be affected by development and construction activity. Proposals must identify a safeguarding distance to ensure construction works, including access and drainage arrangements, will not damage or interfere with the root systems in the short or longer term.

The Council will serve Tree Preservation Orders (TPO's) on potentially vulnerable trees which are of significant amenity value to the community as a whole, trees that contribute to the distinctiveness of a place or trees of significant biodiversity value.

Within Conservation Areas, the Council will only agree to the felling of dead, dying, or dangerous trees. Trees felled within Conservation Areas or subject to TPO must be replaced, unless otherwise agreed by the Council.

EP8 HISTORIC ENVIRONMENT.

a) Scheduled Monuments and National Designations.

Where a proposed development potentially has a direct impact on a scheduled monument, the written consent of Historic Environment Scotland is required, in addition to any other necessary consents.

Development proposals will be refused where they will adversely affect Scheduled Monuments and nationally important archaeological sites or their settings unless the developer proves that any significant adverse effect on the qualities for which the site has been designated are clearly outweighed by social or economic benefits of national importance.

b) Local Designations.

Development proposals which adversely affect sites of local archaeological importance or the integrity of their settings will be refused unless;

- a) Local public benefits clearly outweigh the archaeological value of the site, and
- b) There is no suitable alternative site for development, and
- c) Any adverse effects can be satisfactorily mitigated at the developer's expense.

The Council will consult Historic Environment Scotland and the Regional Archaeologist on development proposals which may affect Scheduled Monuments, nationally important archaeological sites and locally important archaeological sites.

EP10 LISTED BUILDINGS.

Development proposals will be refused where they would have a detrimental effect on the character, integrity or setting of a listed building. Alterations and extensions to listed buildings or new developments within their curtilage must be of the highest quality, and respect the original structure in terms of setting, scale materials and design.

No listed building should be demolished unless it can be clearly demonstrated that every effort has been made to retain it. Where the demolition of a listed building is proposed it must be shown that;

- The building is not of special interest, or
- The building is incapable of repair.
- The demolition of the building is essential to delivering significant benefits to economic growth or the wider community.
- The repair of the building is not economically viable and that it has been marketed at a price reflecting its location and condition to potential restoring purchasers for a reasonable price.

New development must be of a comparable quality and design to retain and enhance special interest, character and setting of the listed building (s).

Enabling development may be acceptable where it can be shown to be the only means of retaining a listed building (s). The resulting development should be of a high design quality protecting the listed building (s) and their setting and be the minimum necessary to enable its conversion and re-use.

EP11 BATTLEFIELDS, GARDENS AND DESIGNED LANDSCAPES.

Development proposals which adversely affect nationally designated Battlefields or Gardens and Designed Landscapes or their setting will be refused unless;

- a) The overall character and reasons for the designation will not be compromised, or
- b) Any significant adverse effects can be satisfactorily mitigated and are clearly outweighed by social, environmental, economic or strategic benefits.

The Council will consult Historic Environment Scotland and the Regional Archaeologist on any proposals which may affect Inventory Sites.

EP12 MANAGEMENT AND ENHANCEMENT OF THE WATER ENVIRONMENT.

a) Flooding.

New development will not be supported if it would be at significant risk of flooding from any source or would materially increase the possibility of flooding elsewhere. For development at or near coastal locations, this includes consideration of future flooding that may be caused by sea level rise and/or coastal change eroding existing natural defences in the medium and long term.

Proposals for development in areas considered to be at risk from flooding will only be permitted where a flood risk assessment to comply with the recommendations of Scottish Planning Policy and to the satisfaction of Scottish Environment Protection Agency and the Council is provided by the applicant.

There are different levels of flood risk assessment dependent on the nature of the flood risk. The level of assessment should be discussed with the Council prior to submitting a planning application.

Level 1 - a flood statement with basic information with regard to flood risk.

Level 2 - full flood risk assessment providing details of flood risk from all sources, results of hydrological and hydraulic studies and any appropriate proposed mitigation.

Assessments must demonstrate that the development is not at risk of flooding and would not increase the probability of flooding elsewhere. Level 2 flood risk assessments must be signed off by a competent professional. The Flood Risk Assessment and Drainage Impact Assessment for New Development Supplementary Guidance provides further detail on the information required.

Due to continuing changes in climatic patterns, the precautionary principle will apply when reviewing any application for an area at risk from inundation by floodwater. Proposed development in coastal areas must consider the impact of tidal events and wave action when assessing potential flood risk.

The following limitations on development will also be applied to take account of the degree of flooding as defined in Scottish Planning Policy;

- a) In areas of little to no risk (less than 0.1%), there will be no general constraint to development.
- b) Areas of low to medium risk (0.1% to 0.5%) will be considered suitable for most development. A flood risk assessment may be required at the upper end of the probability range i.e. (close to 0.5%) and for essential civil infrastructure and the most vulnerable uses. Water resistant materials and construction may be required. Areas within this risk category will generally not be suitable for civil infrastructure. Where civil infrastructure must be located in these areas or is being substantially extended, it should be designed to be capable of remaining operational and accessible during flooding events.
- c) Areas of medium to high risk (0.5% or above) may be suitable for:
 - Residential, institutional, commercial and industrial development within built up areas provided that flood protection measures to the appropriate standard already exist and are maintained, are under construction, or are a planned measure in a current flood management plan;
 - Essential infrastructure within built up areas, designed and constructed to remain operational during floods and not impede water flow;
 - Some recreational, sport, amenity and nature conservation uses, provided appropriate evacuation procedures are in place, and
 - Employment related accommodation e.g. caretakers or operational staff.

Areas within these risk categories will generally not be suitable for the following uses and where an alternative, lower risk location is not available;

- Civil infrastructure and most vulnerable uses.
- Additional development in undeveloped and sparsely developed areas, unless a location is essential for operational reasons e.g. for navigation and water based recreation, agriculture, transport or utilities infrastructure (which should be designed to be operational during floods and not impede water flows).
- New caravan and camping sites.

Where development is permitted, measures to protect against or manage flood risk will be required and any loss of flood storage capacity mitigated to achieve a

neutral or better outcome. Water resistant materials and construction must be used where appropriate. Land raising and elevated buildings on structures such as stilts are unlikely to be acceptable as they are unsustainable in the long term due to sea level rise and coastal change.

b) Surface Water Drainage: Sustainable Urban Drainage Systems (SUSDS)

Surface water from development must be dealt with in a sustainable manner that has a neutral effect on flooding or which reduces the risk of flooding. The method of dealing with surface water must also avoid pollution and promote habitat enhancement and amenity. All sites must (except single houses) be drained by a sustainable drainage system (SUDS) designed in line with current CIRIA guidance. Drainage systems must contribute to enhancing existing "blue" and "green" networks while contributing to place-making, biodiversity, recreational, flood risk and climate change objectives.

When considering the appropriate SUDS design for the development the most sustainable methods, such as rainwater harvesting, green roofs, bio retention systems, soakaways, and permeable pavements must be considered first. If it is necessary to include surface water attenuation as part of the drainage system, only above ground attenuation solutions will be considered, unless this is not possible due to site constraints.

If below ground attenuation is proposed the developer must provide a robust justification for this proposal. Over development of a site or a justification on economic grounds will not be acceptable. When investigating appropriate SUDS solutions developers must integrate the SUDS with allocated green space, green networks and active travel routes to maximise amenity and biodiversity benefits.

Specific arrangements must be made to avoid the issue of permanent SUDS features becoming silted-up with run-off. Care must be taken to avoid the spreading and/or introduction of invasive non-native species during the construction of all SUDS features. On completion of SUDS construction the developer must submit a comprehensive Operation and Maintenance Manual. The ongoing maintenance of SUDS for all new development will be undertaken through a factoring agreement, the details of which must be supplied to the Planning Authority.

All developments of less than 3 houses or a non-householder extension under 100 square metres must provide a Drainage Statement. A Drainage Assessment will be required for all developments other than those identified above.

c) Water Environment

Proposals, including associated construction works, must be designed to avoid adverse impacts upon the water environment including Ground Water Dependent Terrestrial Ecosystems and should seek opportunities for restoration and/or enhancement, if appropriate. The Council will only approve proposals impacting on water features where the applicant provides a report to the satisfaction of the Council that demonstrates that any impact (including cumulative) on water quality, water quantity, physical form (morphology), river hydrology, sediment transport and erosion, coastal processes (where relevant), nature conservation (including protected species), fisheries, recreational, landscape, amenity and economic and social impact can be adequately mitigated.

The report must consider existing and potential impacts up and downstream of the development particularly in respect of potential flooding. The Council operates a presumption against the culverting of watercourses and any unnecessary engineering works in the water environment.

A buffer strip of at least 6 metres between any new development and all water features is required and should be proportional to the bank width and functional river corridor (see table on page 104). This must achieve the minimum width within the specified range as a standard, however, the actual required width within the range should be calculated on a case by case basis by an appropriately qualified individual. These must be designed to link with blue and green networks, including appropriate native riparian vegetation and can contribute to open space requirements.

Developers may be required to make improvements to the water environment as part of the development. Where a Water Framework Directive (WFD) water body specific objective is within the development boundary, or in proximity, developers will need to address this within the planning submission through assessment of potential measures to address the objective and implementation, unless adequate justification is provided. Where there is no WFD objective the applicant should still investigate the potential for watercourse restoration along straightened sections or removal of redundant structures and implement these measures where viable.

Width to watercourse (top of bank)	Width of buffer strip (either side)
Less than 1m	6m
1-5m	6-12m
5-15m	12-20m

15m+

20m+

The Flood Risk Assessment and Drainage Impact Assessment for New Development Technical Guidance provides further detail on the information required to support proposals.

EP13 FOUL DRAINAGE

All development within or close to settlements (as defined in the Local Development Plan) of more than 2,000 population must connect to the public sewerage system unless connection is not permitted due to lack of capacity. In such circumstances, temporary provision of private sewerage systems may be allowed provided Scottish Water has confirmed investment to address this constraint has been allocated within its investment Programme and the following requirements have been met;

- Systems must not have an adverse effect on the water environment.
- Systems must be designed and built to a standard which will allow adoption by Scottish Water.
- Systems must be designed such that they can be easily connected to a public sewer in the future. Typically this will mean providing a drainage line up to a likely point of connection.

All development within or close to settlements (as above) of less than 2,000 population will require to connect to public sewerage except where a compelling case is made otherwise. Factors to be considered in such a case will include size of the proposed development, whether the development would jeopardise delivery of public sewerage infrastructure and existing drainage problems within the area. Where a compelling case is made, a private system may be acceptable provided it does not pose or add a risk of detrimental effects, including cumulative, to the natural and built environment, surrounding uses or amenity of the general area.

Where a private system is deemed to be acceptable, within settlements as above or small scale development in the countryside, a discharge to land, either full soakaway or raised mound soakaway, compatible with Technical Handbooks (which sets out guidance on how proposals may meet the Building Regulations) must be explored prior to considering a discharge to surface waters.

EP14 POLLUTION, CONTAMINATION & HAZARDS.

a) Pollution.

Development Proposals which may cause significant air, water, soil, light or noise pollution or exacerbate existing issues must be accompanied by a detailed assessment report on the levels, character and transmission of the potential pollution with measures to mitigate impacts. Where significant or unacceptable impacts cannot be mitigated, proposals will be refused.

b) Contamination.

Development proposals on potentially contaminated land will be approved where they comply with other relevant policies and;

- i) The applicant can demonstrate through site investigations and risk assessment, that the site is in a condition suitable for the proposed development and is not causing significant pollution of the environment, and
- ii) Where necessary, effective remediation measures are agreed to ensure the site is made suitable for the new use and to ensure appropriate disposal and/ or treatment of any hazardous material.

c) Hazardous sites.

Development proposals must avoid and not impact upon hazardous sites or result in public safety concerns due to proximity or use in the vicinity of hazardous sites.

EP16 GEODIVERSITY AND SOIL RESOURCES.

Where peat and other carbon rich soils are present disturbance to them may lead to the release of carbon dioxide contributing to the greenhouse gas emissions. Applications should minimise this release and must be accompanied by an assessment of the likely effects associated with any development work and aim to mitigate any adverse impacts arising.

Where areas of important geological interest are present, such as geological Sites of Special Scientific Interest (SSSI) or Geological Conservation Review (GCR) sites are present, excavations or built development can damage, destroy and/or prevent access to the irreplaceable geological features. Development should avoid sensitive geological areas or otherwise demonstrate how the geological interests will be safeguarded.

For major developments, minerals and large scale (over 20MW) renewable energy proposals, development will only be permitted where it has been demonstrated that unnecessary disturbance of soils, geological interests, peat and any associated vegetation is avoided. Evidence of the adoption of best practice in the movement, storage, management and reinstatement of soils must be

submitted along with any relevant planning application, including, if necessary, measures to prevent the spread of invasive non-native species.

Major developments, minerals and large scale renewable energy proposals on areas of peat and/or land habitat will only be permitted for these uses where:

- a) The economic, social and/or environmental benefits of the proposal outweigh any potential detrimental effect on the environment (in particular with regard to the release of carbon dioxide into the atmosphere); and
- b) It has been clearly demonstrated that there is no viable alternative.

Where development on peat is deemed acceptable, a peat depth survey must be submitted which demonstrates that the areas of deepest peat have been avoided. Where required, a peat management plan must also be submitted which demonstrates that unnecessary disturbance, movement, degradation or erosion of peat is avoided and proposes suitable mitigation measures and appropriate reuse.

Commercial peat extraction will not be permitted.

COMMITTEE SITE PLAN

ROTHES

Application Reference Number: **19/00156/S36**

Erect 29 wind turbines consisting of 18 turbines of an overall height from base to tip not exceeding 225m
8 turbines of an overall height from base to tip not exceeding 200m and 3 turbines of an overall height from base to not exceeding 149.9m
associated infrastructure includes external transformer housing crane pads turbine foundations access tracks 2 substation underground electricity cable anemometry mast
